Seasonal influenza vaccine uptake amongst GP Patients in England

Provisional monthly data for 1 September 2017 to 30 November 2017

By 'Old' Area Team and Clinical Commissioning Group

The DCB2205 Seasonal Influenza Uptake (GP Patient) Survey has received full approval from the Data Coordination Board for the 2017 to 2018 influenza season.

The DCB2211 Seasonal Influenza Uptake in Children (GP Patient) Survey has received full approval from the Data Coordination Board for the 2017 to 2018 influenza season.

Seasonal Flu Vaccine Uptake (GP) 2017/18 - DATA ON GP REGISTERED PATIENTS

Provisional end of November 2017 cumulative uptake data for England on influenza vaccinations given from 1 September 2017 to 30 November 2017

FOOTNOTES

This collection has received approval from the Data Coordination Board (DCB) for the 2017 to 2018 influenza season.

1. Data is provisional and represents 96.9% of all GP practices in England responding to the November 2017 Main GP survey (purple) compared with 95.1% of practices in the same survey month in 2016/17.
2. Data is provisional and represents 96.6% of all GP practices in England responding to the November 2017 Child GP Flu Survey (green) compared with 95.1% of practices in the same survey month in 2016/17.
3. Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.9% GP practice sample for the main survey and 96.6% for the Child GP Flu Survey and is therefore NOT an extrapolated figure for all of England.
4. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at;
https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/600880/annual_flu__letter_2017to2018.pdf
5. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.
6. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2017. Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or Area Teams and CCGs.

FOOTNOTES

This collection has received approval from the Data Coordination Board (DCB) for the 2017 to 2018 influenza season.

1. Data is provisional and represents 96.9% of all GP practices in England responding to the November 2017 Main GP survey (purple) compared with 95.1% of practices in the same survey month in 2016/17.

2. Data is provisional and represents 96.6% of all GP practices in England responding to the November 2017 Child GP Flu Survey (green) compared with 95.1% of practices in the same survey month in 2016/17.

3. Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.9% GP practice sample for the main survey and 96.6% for the Child GP Flu Survey and is therefore NOT an extrapolated figure for all of England.

4. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at;
https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/600880/annual_flu__letter_2017to2018.pdf

5. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.

6. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2017. Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or Area Teams and CCGs.

FOOTNOTES

This collection has received approval from the Data Coordination Board (DCB) for the 2017 to 2018 influenza season.

1. Data is provisional and represents 96.9% of all GP practices in England responding to the November 2017 Main GP survey (purple) compared with 95.1% of practices in the same survey month in 2016/17.
2. Data is provisional and represents 96.6% of all GP practices in England responding to the November 2017 Child GP Flu Survey (green) compared with 95.1% of practices in the same survey month in 2016/17.
3. Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.9% GP practice sample for the main survey and 96.6% for the Child GP Flu Survey and is therefore NOT an extrapolated figure for all of England.
4. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at;
https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/600880/annual_flu__letter_2017to2018.pdf
5. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.

6. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2017. Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or Area Teams and CCGs.

FOOTNOTES

This collection has received approval from the Data Coordination Board (DCB) for the 2017 to 2018 influenza season.

1. Data is provisional and represents 96.9% of all GP practices in England responding to the November 2017 Main GP survey (purple) compared with 95.1% of practices in the same survey month in 2016/17.
2. Data is provisional and represents 96.6% of all GP practices in England responding to the November 2017 Child GP Flu Survey (green) compared with 95.1% of practices in the same survey month in 2016/17.
3. Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.9% GP practice sample for the main survey and 96.6% for the Child GP Flu Survey and is therefore NOT an extrapolated figure for all of England.
4. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at; https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/600880/annual_flu__letter_2017to2018.pdf
5. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.
6. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2017. Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or Area Teams and CCGs.

FOOTNOTES

This collection has received approval from the Data Coordination Board (DCB) for the 2017 to 2018 influenza season.

1. Data is provisional and represents 96.9% of all GP practices in England responding to the November 2017 Main GP survey (purple) compared with 95.1% of practices in the same survey month in 2016/17.
2. Data is provisional and represents 96.6% of all GP practices in England responding to the November 2017 Child GP Flu Survey (green) compared with 95.1% of practices in the same survey month in 2016/17.
3. Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.9% GP practice sample for the main survey and 96.6% for the Child GP Flu Survey and is therefore NOT an extrapolated figure for all of England.
4. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at; https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/600880/annual_flu__letter_2017to2018.pdf
5. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.
6. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2017. Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or Area Teams and CCGs.

FOOTNOTES

This collection has received approval from the Data Coordination Board (DCB) for the 2017 to 2018 influenza season.

1. Data is provisional and represents 96.9% of all GP practices in England responding to the November 2017 Main GP survey (purple) compared with 95.1% of practices in the same survey month in 2016/17.
2. Data is provisional and represents 96.6% of all GP practices in England responding to the November 2017 Child GP Flu Survey (green) compared with 95.1% of practices in the same survey month in 2016/17.

3. Where a total for England is quoted (e.g. sum of number of patients registered and number vaccinated) this is taken from the 96.9% GP practice sample for the main survey and 96.6% for the Child GP Flu Survey and is therefore NOT an extrapolated figure for all of England.

4. For definitions of clinical at-risk groups for those aged 6 months to under 65 years, see annual flu Letter published on the GOV.UK at;
https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/600880/annual_flu__letter_2017to2018.pdf

5. The age under 65 clinical at-risk group data includes pregnant women with other risk factors but excludes otherwise 'healthy' pregnant women and carers.

6. These data include all women already pregnant or becoming pregnant (in the first, second or third trimesters) as diagnosed by a medical professional from 1 September 2017. Accurately identifying this denominator is challenging and denominators may be regarded as over-inclusive as they may include women that become eligible and then ineligible before they are vaccinated. Vaccine uptake for pregnant women is likely to be underestimated.

All figures are derived from data as extracted from records on GP systems or as submitted by GP practices or Area Teams and CCGs.
