Maps of livestock populations in 2000 and 2010 across England

Overview

This report provides maps of key agricultural activity across England, comparing spatial distributions in 2000 to 2010. Results are aggregated to 5km$^2$ level to give a good degree of resolution, whilst preserving the confidentiality of survey respondents.

Data limitations

The data are collected through the annual Defra June Survey of Agriculture of key agricultural activities (land areas, livestock numbers, labour force). In Census years (2000 and 2010), all farms in England were surveyed and responses were received from around 70% of farms. Estimates were made for the non-respondents and these maps are based on the combined dataset of actual responses and estimates.

Estimates are also made of the precise location of the land areas and livestock numbers so the values presented in these maps will not accurately reflect the actual activity in the 5km$^2$ grid square. They should be treated as a general picture for illustrative purposes only.

More detailed methodology of the June survey is available at http://www.defra.gov.uk/statistics/foodfarm/landuselivestock/junesurvey/junesurveyresults/
