Application for a licence to operate a travelling circus in England using wild animals

Section 1 – Operator to be licensed

MONEY REC'D

Operator Details

*First Name	CAROL
*Family Name	MACMANUS
*Email	[REDACTED]
Mobile telephone number	[REDACTED]
Other telephone number	
*Business Address	[REDACTED] [REDACTED] [REDACTED] [REDACTED] Postcode [REDACTED]
*Name of Circus	CIRCUS MONDAO
Name of Business if different from above	

*Mandatory Fields

Section 2 – Disqualifications

I confirm that I am not disqualified under any of the following legislation:

- (1) Section 5(3) of the Pet Animals Act 1951 (a) from keeping a pet shop;
- (2) Section 1 of the Protection of Animals (Amendment) Act 1954 (b) from having custody of an animal;
- (3) Section 3(3) of the Animal Boarding Establishments Act 1963(c) from keeping a boarding establishment for animals;
- (4) Section 4(3) of the Riding Establishments Act 1964(d) from keeping a riding establishment;
- (5) Section 3(3) of the Breeding of Dogs Act 1973(e) from keeping a breeding establishment;
- (6) Section 6(2) of the Dangerous Wild Animals Act 1976(f) from keeping a dangerous wild animal; or
- (7) Section 34 of the Animal Welfare Act 2006

Section 3 – Payment Details

The fee for this application is £389.36. Please submit a cheque or postal order made payable to "Animal Health and Veterinary Laboratories Agency" or "AHVLA" with this form.

Please note: you will also be charged for the costs of the inspection, once it has taken place. The fee for inspections will be £72.53 per hour plus the actual costs of any travelling, accommodation and other expenses reasonably incurred by or on behalf of the inspector. The hourly rate will be charged for the time spent carrying out an inspection, travelling to or from the site of inspection and on associated administration.

Section 4 – Attachments

	Attached		To follow by post/email
	Yes	No	
(1) Tour Itinerary	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(2) List of animals to be licensed*	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(3) List of current location of animals to be licensed*	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(4) Individual Record	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(5) Care Plans	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(6) List of authorised persons	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Please tick as appropriate.

*We cannot begin to process the application without these items

If this application is being submitted while the circus is at winter quarters or not in England please indicate what date touring starts in England / /

Section 5 – Details of Lead Vet

Name

Practice address

Postcode

Telephone number

Section 6 – Circuses travelling from outside England

Are you a travelling circus from another country outside England? Yes No

If no, please move to Section 7.

If yes, when do you intend to arrive in England? / /

Do you hold a licence or other authorisation as an operator of a travelling circus in your home country? Yes No

If yes, please attach a copy to this application form.

Section 7 – Declaration

I am aware of the provisions of the Welfare of Wild Animals in Travelling Circuses (England) Regulations 2012. The details contained in the application form and any attached documentation are correct to the best of my knowledge and belief.

Signing below indicates that you have read and understood the above declaration, and that in Section 2, and agree to us contacting the lead veterinarian listed in Section 5 in relation to your licence application.

Dear defra team

Please find enclosed a itinerary from our last 2 touring seasons 2011 and 2012

I have enclosed these so that you can see that we mostly travel in the same areas each year and normally around the same times each year aswell.

We have a good knowledge of the towns that we go to each year and have local farmers who we purchase haylage for feed and straw for bedding each year.

Most of the venues we go to are farmers fields and the farmer will supply us with a trailer for our manure.

I have enclosed a list of our first 3 venues for 2013 at this moment this is all I have as with the very bad weather we have had this year a lot of venues are very wet and a lot of farmers do not want us on there land as it will be a mud bath.

As soon as I have further venues I will update you straight away.

Sincerely,
Carol MacManus
On behalf of circus mondao

7 January 2013 16:36

Dear Carol,

Thank you for your application to individually identify, for the purposes of the Wild Animals in Travelling Circuses (England) Regulations 2012, two of your wild animals by tamper-proof unique individual eartags rather than by microchip.

Permission is granted for the following two animals to be identified by eartags rather than microchip:-

Reindeer UK kuo484 494 (Naughty)

Reindeer UK kuo484 492 (Nice)

It is your responsibility to ensure that the inspector will reasonably be able to read such tags during the course of an inspection. Please keep a copy of this approval with your list of licensed animals.

Yours sincerely,

[redacted signature]

Classical Circus Animal Health and Welfare Risk Assessment

Hazards

Biological

- Internal parasites.
- External parasites.
- Overgrown hooves.
- Overgrown claws.
- Dentition problems.
- Inappropriate diet.
- Sudden unexplained disease onslaught.

Chemical

- Using inappropriate containers to carry water, food, etc.
- Toxic plants when grazing hedgerows etc.

Physical

- Bitten by other animals.
- Kicked by other animals.
- Frightened by unusual noise or distraction.
- Dramatic drop in temperatures.
- Faulty equipment.
- Injury from stakes or other objects on route to ring.
- Exposure to sick animals.
- Ill fitting or worn harness.
- Stress from heavy work load.
- Insecure transport arrangements.
- Unsatisfactory loading and unloading.
- Insufficient protection from adverse weather conditions.
- Unsuitable housing.
- Inexperienced trainers.
- Inexperienced handlers.
- Insufficient prep time for new training behaviours.
- Sudden changes from the status quo. i.e. new handler or groom.
- Introduction to other animals or social groups.

- Deviation from individual care plans.

Psychosocial

- Any bad experience which had a profound physical or psychological effect on the animal at the time of happening and is remembered or triggered to once again produce a state of fear or trauma:

Ergonomic

- Inadequate care plans.
- Uncaring staff.
- Ill devised policies.
- Lack of attention.
- Insufficient knowledge of the particular animal's behaviour patterns.
- Non compliance with current best practice guidelines.
- Little or no communication between trainers.
- Little or no training or CPD.
- Too long between daily visual on site checks.
- No regular policy review dates.

Detail

The hazards mentioned may not apply to every species but cover a broad range of animals used in the circus and other related entertainment industries.

With captive animals and in particular animals which live and work in a circus and/or training environment the above mentioned hazards are a potential source of damage and can cause harm or adverse health effects if not taken into account when assessing risk factors.

However the way in which the majority of trained animals in entertainment are managed and kept the risks of any of the hazards on the list above becoming a reality is slim. The animals which work in entertainment are the trainer's tools of the job, they are a resource and the trainers have a vested interest in keeping the animals healthy and well.

Most trainers and working animal owners do not enter into it because they want to make huge amounts of money. They do it mostly because it is passed down to them from their fathers and grandfathers before them but the main reason is that they enjoy being around animals and over time have an empathy with the animals in their care.

An animal will work best if it has a sense of wellbeing, is in good health, feels secure and at ease with the trainers who work with it. With captive animals all of these things must come from the owner or trainer as the animal cannot provide for itself.

The debate over whether animals do have feelings or not is subjective, and will continue long into the future, however animal trainers will argue that animals certainly do have

feelings. Maybe not in the anthropomorphic way described by some pet owners but in the way an animal shows by its behaviour that it likes or dislikes a certain action.

A zebra may greet its trainer in the morning with a nuzzle and a grunt pushing its companion out of the way to get the first bit of carrot being offered. This is a learned behaviour and comes as a reaction to a kind gesture from the trainer. The animal has nothing to fear and has a feeling of well being and at ease with its surroundings and with a human it trusts and has had no adverse treatment from this trainer. Nor will it have had a bad experience from outside influences so it feels secure.

However a less caring trainer may also offer the zebra a carrot in the morning but this time the zebra only comes as far as is necessary to snatch the carrot and move backwards. This is also learned behaviour as past experiences have taught the animal to shy away from this person, however the zebra wants the carrot so has taught its self how to get the carrot without having contact with the giver or being frightened by outside influences.

Can we now interpret these behaviours into feelings? Maybe the first zebra has a feeling of pleasure and anticipation on seeing the trainer approach with the carrot, a feeling of jealousy when pushing its companion away to get the first bit, a feeling of greed and a feeling of wellbeing when the trainer stands there with the animal when it eats the carrot. It can also be an experience which produces feelings of wellbeing and intense pleasure in an animal, so much so that the animal actively looks to reproduce the feeling by revisiting the event that caused it in the first place.

Whereas the second zebra may also have feelings of greed, jealousy and maybe hunger too. It will almost certainly have feelings of caution, apprehension and alertness, however it will still actively look to revisit the event but not with the same feelings of wellbeing as the first zebra. Perhaps the only reason the zebra wants to revisit the event is because it wants the carrot and this instinctively becomes the first priority.

It is impossible to know what an animal is really feeling, however most trainers believe that animals do have feelings which are demonstrated in the animals behavioural patterns. What good trainers also know is that knowledge of the following all contribute to the health, welfare and wellbeing of an animal.

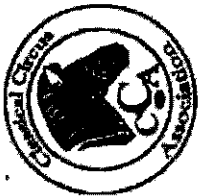

Control Measures and action needed to maintain control include but are not limited to:

- Humane handling
- Good practice policy making.
- Planning designs that work, including diet, companionship, environment, special needs, transport, etc.
- Timely and regular Veterinary care, including teeth and parasite control.
- Regular farriery treatment when appropriate.
- Regular and thorough valuation of tasks, jobs and products.
- Systems compatible with the needs, abilities and limitations of the animals.
- A broad understanding of animal behaviour taking into account the physical, social, cognitive, environmental and other relevant elements.

- Organisational policies and processes which take into account, human resource management, communication, teamwork, cooperative work.
- Policies which take into account human/animal interaction in order to optimise both animal and human wellbeing.
- Dedicated caring trainers and handlers.
- Animals monitored daily.
- Workloads designed to take into account the animals ability to perform the tasks asked of it and must include the age and willingness of the animal to cooperate.
- All training and performances and safety details must be discussed and rehearsed prior to the animals being brought into the training or performance area whether the public are present or not.
- All animal harnesses and equipment to be checked on a daily basis.
- Only essential competent employees to assist with the animal's performance.

If the above principles are in place and are reviewed on a regular basis and also changed as things evolve in the workplace then the risks to the animal from the above mentioned hazards are low.

Captive animals will always be at the mercy of their human care givers so perhaps the most important way to ensure that the health, safety, welfare and wellbeing of an animal is by providing every animal with its needs and just as importantly a competent, knowledgeable, caring trainer and handler.
