LOCAL VARIATION IN AVOIDABLE DEATH RATES PUBLISHED

Figures for Derbyshire, Nottinghamshire, Leicestershire, Lincolnshire and Rutland, in causes of early death

A new website showing significant variation in early death rates has been launched today (Tuesday) to drive public awareness and local action to tackle public health problems.

Longer Lives, a new Public Health England (PHE) website, allows people to see easily local information for Derbyshire, Nottinghamshire, Leicestershire, Lincolnshire and Rutland on early deaths from major killers, like heart disease, stroke and cancer, and how it varies across the area, and the country.

Using a traffic-light rating system, it ranks areas showing those above average in tackling avoidable deaths as green, while those that still have more to do, are red.

The website contains a range of data that for the first time allows people to easily compare an area's mortality against those with similar populations, incomes and levels of health. Overall it shows that the north of England has a higher risk of early death than the south, but when comparing areas of a similar socioeconomic status, it reveals a more complex picture.

Across the East Midlands, the picture is mixed with early death rates varying across the nine local authorities' areas. For example:

- Rutland Council is in the top five councils in the country for the lowest rate of deaths from cancer.
- Leicestershire County Council is in the top 30 local authorities for the lowest overall rates of premature deaths.
- Nottingham County Council ranks better than the national average for overall premature deaths.
- Lincolnshire County Council has low death rates for liver disease but ranks higher for rates of death from cancer.
- Derbyshire County Council has low levels of death rates from liver disease ranking in the top 30 local authorities.

The data and website will provide local areas with information to help them understand their own position and better target efforts to improve the health of the people they serve.

Dr Fu Meng-Khaw, Centre Director at PHE East Midlands Centre, said: "Longer Lives will support local government in its new role as the champion for their public's health. It presents a clear picture of health in local areas – where it is good and where there is more to do – so everyone involved can consider and agree how to make improvements from a common basis of the same information.

“The website goes further than just data, and contains evidence of what needs to be done and case studies of what has been successful elsewhere. Longer Lives has the potential to make a real difference to the health of each and every community in the East Midlands, and we’ll be working hard with local authorities and the NHS to bring about the changes we need.”

The evidence is clear - a person’s likelihood of dying prematurely from one of the top four killers varies widely between local authorities due to differences in risk factors, such as obesity, alcohol and smoking and that these are closely linked to economic deprivation.

Local councils were given the leadership of public health in April 2013 as part of a move to empower local areas to make real change in people’s lives. To help them deliver these improvements the government has given them £5.46bn of funding over a two-year period.

Leading the work of the local Health and Wellbeing Board with Clinical Commissioning Group partners, local councils have a pivotal role in piloting the local health and care system to improve the health of their local citizens.

The website provides examples of best practice from other local authorities, guidance from the National Institute for Health and Care Excellence (NICE), and links to NHS Choices so that individuals, families and citizens can learn about these conditions and what they can do to improve their health.

This data is the first information to be rolled out as part of the Government’s plans to provide the public and health professionals in local areas with clear, easy accessible information on how health and care services are doing in improving health outcomes wherever we live.

Notes to Editors

- To access the site immediately please visit: **longerlives.phe.org.uk**
Username: preview
Password: Longerlives1
Please note these details will give you immediate access but information on the site is under embargo until 00:01 on Tuesday 11 June.
- The data provided in *Longer Lives* is from the Public Health Outcomes Framework (PHOF). This is the first time it has been published in this form, making the information easy to access, view and compare. It is also the first time it has been published alongside relevant supporting information, such as the intervention guidance provided by the National Institute for Health and Clinical Excellence (NICE).
- From May 2013 *Longer Lives* will undergo a process of continuous iteration adding new data and responding to feedback from health professionals and users.
- Longer Lives provides peer grouping so local authorities can compare their premature mortality rates with others of similar socioeconomic status. All local authorities are divided into ten groups (each containing fifteen local authorities) by their Index of Multiple Deprivation.
