# 1) Introduction

The UK Government is determined to help end extreme poverty around the world. We believe that international development is not just the right thing to do, but the smart thing to do. Britain has never stood on the sidelines, and it is in all our interests for countries around the world to be stable and secure, to have educated and healthy populations and to have growing economies. DFID aims to end aid dependency through jobs – building the economies of developing countries so that they can stand on their own feet.

No country can develop with only half of the population involved, that is why DFID is scaling up its support for women and girls across all of our country programmes, including an increased emphasis on girls education and preventing violence against women and girls.

We are also focussing on what works, investing in research and taking advantage of new technology to ensure that UK development support has the greatest impact.

DFID is committed to being a global leader on transparency, and in 2012 was ranked the top aid organisation in the world for transparency. Transparency is fundamental to improving accountability both to UK citizens and to citizens in the countries where we work. Transparency also helps us achieve greater value for money and improves the effectiveness of aid. As part of our commitment to transparency we publish Operational Plans for each area of our work setting out what we will achieve and how we will achieve it. In June 2013 DFID launched a new online tool, Development Tracker, to provide an easy way to access information and data about DFID programmes.

With less than 1000 days to go, we will continue to focus our efforts on delivering the Millennium Development Goals, creating wealth in poor countries, strengthening their governance and security and tackling climate change. The prize, in doing so, is huge: a better life for millions of people, and a safer, more prosperous world.

## 2) Context

**India is a growing global power and a key partner for the UK.** Prime Minister Cameron and Prime Minister Singh have agreed to renew and deepen the partnership between the UK and India. India has the world's 11th largest economy, with 6.9% growth in 2011. It has the second largest population in the world, with a mean age of 26. It is a leading voice in the Commonwealth and its influence in the UN and G20 is increasing year by year. A stable and prosperous India brings many benefits to the UK. India is the world's largest democracy. It is a growing market for UK goods and services. Indian businesses that invest in the UK bring jobs and prosperity to both countries.

**Inclusive growth and development is a top priority of the Government of India (GoI).** The GoI has robust Five Year Plans which provide strategic direction for all development investments in India. The new 12th Five Year Plan sets out India's development priorities: inclusive growth; sustainable management of natural resources; better access to essential services in health and education; infrastructure; energy security; agricultural development; special attention to disadvantaged groups; and good governance at all levels.

**Poverty is falling in India.** India became a middle income country in 2008 and its poverty headcount (400 million in 2010) is falling fast. However, today, India is still home to one third of the world's people living below \$1.25 - more than all the poor in sub-Saharan Africa. Average income is still one third of China. 600 million people have no access to sanitation and 400 million have no access to modern energy. Total aid to India is low at \$1.50 per person (compared to \$28 for Sub-Saharan Africa). **India increasingly has the financial resources to invest in poverty reduction programmes itself.** The GoI has a number of 'centrally-sponsored schemes' that finance development; its spend through these schemes has grown rapidly. Absolute public spending on education has more than doubled since 2006 (from £15 billion in 2006 to £35 billion in 2011), as has absolute spending on health since 2006 (from £7 billion in 2006 to around £15 billion in 2011). What India looks for from international donors is now mainly technical assistance to improve the impact its own programmes have on poverty.

**There is a significant disparity between India's states.** States to the south and west are increasingly prosperous. 8 states are home to 65% of India's poor - Bihar, Madhya Pradesh, Orissa, Uttar Pradesh, Rajasthan, Jharkhand, Chhattisgarh and West Bengal. Poverty reduction in these states remains critical to global success in meeting the MDGs. A central priority is inclusive growth - these states face a shortage of infrastructure and their economies have yet to generate sufficient employment opportunities to lift millions out of poverty; they have received only a small proportion of the inflow of private capital into India. Improved access to basic services is also vital - particularly for women & girls. The poorest are caught in a cycle of truncated education; early marriage (half marry before 18) early and un-spaced pregnancy; poor nutrition and poor access to water and sanitation. This cycle passes easily from grandmothers to mothers to daughters, yet can be broken. Discrimination on the basis of gender, caste, ethnicity and religion remains a concern: Scheduled Tribes and Castes live in the kind of poverty experienced by the general population 10 or even 20 years ago.

**India is an increasingly central player on global development issues.** India is crucial to global progress on issues such as climate change, resource scarcity, food security, multilateral trade reform, disease control and peace and security. It is influential on the development prospects of its own region, and is developing an increasing presence in Africa. Many countries benefit from India's role in international peacekeeping; its market leadership in the provision of low cost generic medicines; and its trade and investment. India is a development policy innovator and there is increasing interest from developing countries to learn from India's development experience.

## 3) Vision

As India's economy grows, poverty reduces, and India has ever greater prominence in world affairs, our development partnership with India is evolving. In a statement to Parliament on 9th November 2012 the Secretary of State for International Development announced that we have **agreed with India to move to a new development relationship**. From now on, DFID will approve no new financial grant aid to India. Nevertheless, we will responsibly complete by 2015 all our commitments to on-going projects. All new programmes will be either technical assistance or private sector initiatives financed using returnable capital.

Over the next 3 years our **four Strategic Objectives** are:

- 1. Focus on India's low income states** – UK aid will target India's poorer states, where growth has not yet made enough of a dent on poverty. UK assistance will build on the deep and productive partnerships we have built in low incomes states over the last decade.
- 2. Improve the lives of over 10 million poor women and girls.** The UK will invest in: girls' education; access to finance, skills and low carbon energy; safe birth, children by choice and reducing violence against women; children's health and nutrition; and sanitation.
- 3. Catalyse the private sector's potential to combat poverty.** To support faster and more inclusive growth in the poorer states, the UK will develop a new programme of support for pro-poor private investment in such sectors as small and medium-sized enterprises, agri-business, energy, infrastructure, financial services that directly benefit a wide cross-section of poor people in low income states.
- 4. Deepen our engagement with India on global issues where there may be benefits for poor people elsewhere:** such as growth and trade, climate change, resource scarcity, health and disease control and development effectiveness. The UK's global and regional programmes complement our bilateral programme and work in partnership with India to strengthen our collective impact on global development, including by sharing learning, technology and best practice from India with third countries.

Our theory of change is that (a) bringing assets, opportunities and basic services directly to women and girls can break the cycle of poverty passed between generations; (b) investment support to low income states, combined with help to improve the climate for business will create economic opportunities for poor people. We believe that private sector investment can achieve a commercial and developmental bottom line – and that if DFID works alongside other capital investors it can help catalyse new flows of private investment that will boost employment, develop markets and unblock infrastructure constraints; c) that the UK can have the most impact by working with Indian partners to reinforce the impact of India's own programmes, including by piloting innovations and establishing credible evidence on new approaches.

**After the end of our traditional grant programme in 2015**, we will maintain a hub of development expertise in India. We will work together with Indian partners to share skills and expertise in areas such as trade, investment, skills and health. We will continue to make investments in private sector projects which create opportunities for the poor while generating a return. We will also strengthen our partnership with India on global development issues like food security, and climate change. This new approach offers a more up-to-date way of working with India to tackle poverty as it continues to grow and develop. DFID will continue to work with other UK government departments through joint units on trade, energy, growth & climate change, and joint networks on research and education. DFID's co-location with the British High Commission from 2013 will facilitate further collaboration.

## 4) Headline Results

The UK will deliver results through our three state partnerships with Bihar, Orissa and Madhya Pradesh. In addition, we will continue our technical co-operation with West Bengal. The 'footprint' for our investment and wealth creation portfolio, civil society schemes and education support, will be these four states, plus the low-income states of Chhattisgarh, Jharkhand, Rajasthan and Uttar Pradesh. We will measure and report our results using national and project data, where possible triangulated using independent sources. The results below refer to the share of results attributable to DFID support, rather than total results achieved.

Pillar/ Strategic Priority	Indicator	Baseline (including year)	Expected Results (including year)
1. Wealth creation	Number of additional individuals reached with savings, credit, insurance; and number of firms reached with equity and loan guarantees as a result of DFID support (across 8 low income states)	0 individuals (2011)	<b>3 million women</b> between 2011- 2015
2. Wealth creation	Number of new Public-Private-Partnership deals in infrastructure (across 8 low income states)	0 (2011)	<b>35 deals</b> between 2011-2015
3. Access to low carbon energy	Number of additional people with access to low carbon energy (e.g. fuel efficient cook-stoves, solar lanterns) (across 8 low income states)	0 (2012)	<b>0.8 million people</b> between 2011-2015
4. Health	Number of births delivered with the help of nurses, midwives or doctors	2.5 million (2011)	<b>340,000 births</b> between 2011-2015.  (This is the share attributable to DFID support of an overall result of 3.1 million births in 2014/15, and 13.9 million births between 2011-2015.)

## 4) Headline Results (continued)

Pillar/ Strategic Priority	Indicator	Baseline (including year)	Expected Results (including year)
5. Nutrition	Number of pregnant women and under 5 children reached by nutrition programmes (in 8 low income States)	8.6 million (2011)	<b>3.7 million people</b> by 2014/15 of which 2.7 are women. (This is the share attributable to DFID support of a total result of 17.3 million children and pregnant women by 2014/15)
6. Water and Sanitation	Number of people with sustainable access to an improved sanitation facility (in Bihar, Madhya Pradesh and Orissa)	26 million (2009)	<b>2.9 million people</b> by 2014/15. (This is the share attributable to DFID support of a total result of 42 million people by 2014/15.)
7. School Education (Ages 15-16)	Number of girls and boys supported by DFID to enrol in basic education (ages 6-14)	185 million in 2010	<b>835,000 children, of which 406,000 girls</b> (This is the share attributable to DFID support of all children enrolled in government supported elementary schools in the academic year 2011/2012).
	Number of additional girls and boys enrolled in junior secondary school (ages 15-16).	28.2 million (2008) 12.3 million girls	<b>800,000 students, of which 390,000 girls</b> (This is the cumulative number of additional enrolments attributable to DFID support between 2012 and 2015)
8. Governance	Number of women and men supported to have choice and control over their development and to hold decision- makers to account (in 8 low income states)	0 million (2011)	<b>13 million additional people, of which 7.7 million women</b> between 2011-2015

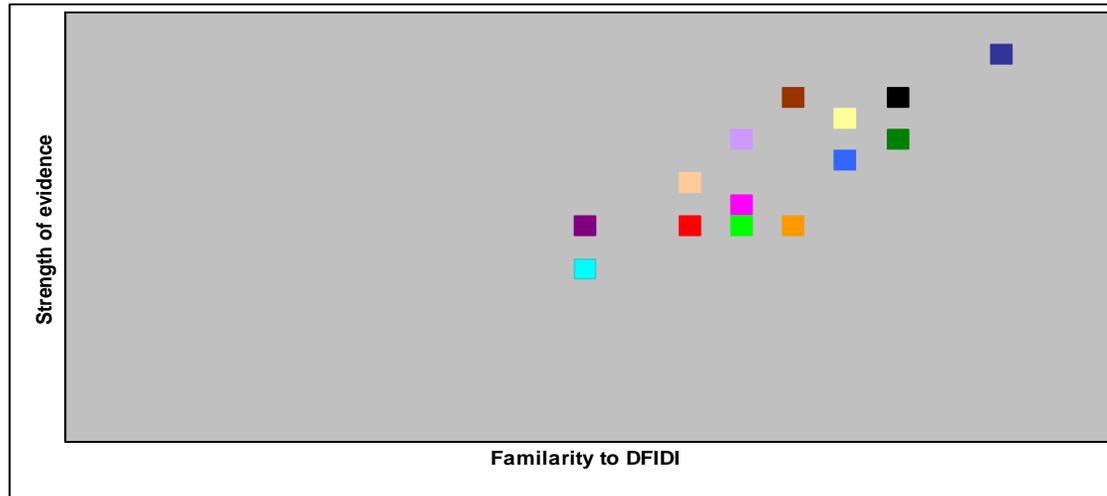

# 4) Results (Evidence)

## Evidence supporting results

This Plan uses both locally-derived evidence and wider research literature extensively. Below we assess the relative strength of the evidence (interventions proven to have impact in South Asia), as well as our DFID India's familiarity in implementing this intervention, across key areas. Where the evidence on what works is more limited – e.g. nutrition behaviour change, violence against women, poor people's direct and indirect benefits from public private partnerships (PPP) in infrastructure – we will emphasise research and impact assessment. By generating and testing evidence at scale – particularly in delivering basic services and improving women and girls' status - this plan will contribute significantly to innovation in India as well as international lesson-learning. Evidence in implementing our investment approach will be gathered to benefit other DFID country programmes. In translating this plan into business cases for new programmes, we will provide a critical evaluation of the evidence, distinguishing between primary studies, synthetic evidence and reports published by other agencies. We will highlight where evidence is limited or uncertain, and programming therefore more risky. We will develop a strategy for using India's rich evidence and data sources for progress monitoring, to ensure international comparability and rigour. In particular, we will seek to learn from DFID India's vast experience of implementing technical assistance programmes to improve our understanding of how to measure the impact of such programmes. As the innovative private sector programme gets underway, we will seek to use opportunities to learn how to demonstrate impact from returnable capital investments.

Primary education	Dark Blue
Health	Black
Public Financial Management reform	Yellow
Water and sanitation	Green
Microfinance	Brown
Climate change	Blue
Empowerment	Purple

Teacher learning	Orange
Nutrition	Magenta
Investment climate & Public Private Partnerships	Light Orange
Secondary education	Green
Access to markets	Red
Skills	Purple
Violence against Women	Cyan

## 5) Delivery and Resources

Our **aid instruments** are evolving to keep pace with India's changing circumstances, and to ensure UK funds continue to have as catalytic a role as possible. In November 2012 the Secretary of State for International Development announced that the UK has agreed with the Government of India (GoI) the end of the UK's traditional grant programme in India. Existing projects will be finished responsibly, with final payments expected in 2015. Until 2015, we will use traditional funding instruments that have proved versatile and effective in the past (project funding reimbursing agreed activities, sector-wide budgetary support linked to performance targets, contracts for technical co-operation services). From now on, all new development cooperation programmes will be either technical assistance programmes focused on sharing skills and expertise, or investments in private sector projects focussed on helping the poor.

To ensure the **smooth transition of our bilateral programme** we are implementing a three-year structured change programme from 2013 to 2016. This will help to ensure we maintain a rigorous focus on portfolio quality of closing programmes and will drive sustainability by ensuring we take a structured approach to exit planning as we close financial aid programmes. This process will include specific discussions with Government of India partners on exit and budget planning in early 2014.

Our programme of support to **pro-poor private investment** is providing both grants and returnable capital to prime investment flows, test and scale up commercially viable concepts and foster social entrepreneurship. In addition to providing finance in poverty-reducing sectors (e.g. infrastructure, agri-business, skills, energy), our programmes offer expertise to help our state partners plan for inclusive economic growth and build a strong enabling environment for business. We have scaled up our support to microfinance, and are helping promote financial inclusion, especially for women. We work with a mix of partners, including the Small Industries Development Bank of India and other organisations promoted by the Government of India.

Our **global programme** will continue to work with a range of partners. We will aim to deepen our policy dialogue with Government, whilst also partnering with civil society and private sector actors to share Indian expertise and experience with low income countries. DFID India will maximise our impact by exploiting the links between our state, national and global programmes and by utilising DFID's large network of country offices, e.g. to share evidence and innovations from our state partnerships with low income partner countries.

In the first half of 2013/14 we will refresh the Strategic Programme Review to ensure that we remain at the forefront of delivering growth for poor people while taking into account the increasing challenges posed by a more variable **climate and resource scarcity** (especially concerning food-water-energy linkages).

The UK's policy dialogue and operational **partnerships** span government, private, non-government and donor organisations; and we will aim to capitalise on this depth and diversity. Our partnership strategy is to leverage and catalyse India's own growing finance and innovation capability to accelerate development. We will develop the following 5 key relationships during the lifetime of this Plan:

- supporting **state governments** to deliver their development plans, especially in strengthening basic services and the investment climate for business;
- sustaining strong policy dialogue with the **GoI** on health, education, climate change and development effectiveness, while deepening discussion in areas where India's global development influence is expanding – e.g. trade, access to medicine and development dialogue on third countries;
- forging new partnerships with the **private sector** to stimulate investment, business activity and economic opportunity, working with institutional investors and intermediaries, infrastructure and enterprise development bodies, business associations, small and medium size enterprises and micro-entrepreneurs;
- learning from and building on the strengths of **other multilateral, bilateral and private donors** who can complement the UK's approach or deliver significant programmes with us;
- working with **civil society and think tanks**, to deliver services, generate and disseminate evidence-based research, enrich the development debate, pilot new approaches and reach the very poorest.

## 5) Delivery and Resources (continued)

Pillar/Strategic Priority	2011/12		2012/13		2013/14		2014/15		Total	
	Resource	Capital								
	£'000	£'000	£'000	£'000	£'000	£'000	£'000	£'000	£'000	£'000
<b>Wealth Creation</b>	17,392	1,349	17,840	5,222	22,000	37,000	27,000	46,000	84,232	89,571
<b>Access to Low Carbon Energy</b>	2,127	0	2,129	0	2,000	0	3,000	0	9,256	0

<b>Reproductive, Maternal and New-born Health</b>	58,529	0	25,232	0	32,000	0	29,000	0	144,761	0
<b>Malaria</b>	1,735	0	1,407	0	1,000	0	1,000	0	5,142	0
<b>HIV/AIDS</b>	25,755	0	274	0	0	0	0	0	26,029	0
<b>Other Health</b>	39,089	0	37,933	0	7,000	0	6,000	0	90,022	0
<b>Water and Sanitation</b>	7,156	289	8,547	0	13,000	0	12,000	4,000	40,703	4,289
<b>Poverty, Hunger and Vulnerability</b>	3,119	800	1,703	456	26,000	0	23,000	0	53,822	1,256
<b>Humanitarian</b>	0	0	0	0	0	0	0	0	0	0
<b>Other MDGs</b>	0	0	0	0	0	0	0	0	0	0
<b>Global Partnerships</b>	91	0	141	0	0	0	0	0	232	0
<b>TOTAL</b>	<b>250,467</b>	<b>17,927</b>	<b>172,718</b>	<b>24,337</b>	<b>170,000</b>	<b>50,000</b>	<b>150,000</b>	<b>60,000</b>	<b>743,185</b>	<b>152,264</b>
<b>TOTAL RESOURCE + CAPITAL</b>		<b>268,394</b>		<b>197,055</b>		<b>220,000</b>		<b>210,000</b>		<b>895,449</b>

## 5) Delivery and Resources (continued)

	2010/11	2011/12	2012/13	2013/14	2014/15	Total (2011-2015)
<b>Frontline staff costs - Pay</b>	2,605	2,701	2,748	2,805	2,924	11,178
<b>Frontline staff costs - Non-Pay</b>	2,658	2,404	2,211	2,312	2,403	9,330
<b>Administrative Costs - Pay</b>	611	490	358	297	298	1,443
<b>Administrative Costs - Non-Pay</b>	194	211	90	157	118	576
<b>TOTAL</b>	6,068	5,806	5,407	5,571	5,743	22,527
<b>Notes :</b>						
<b>2010/11, 2011/12 and 2012/13 figures are as per actual spend reflected in ARIES.</b>						
<b>2013/14 figures are as per the approved allocation.</b>						
<b>2014/15 figures are as per the provisionally approved allocation.</b>						

Our administration costs for 2014/15 depend partly on the charging arrangements for the provision of corporate services once we co-locate with the British High Commission, and the decisions we then make about what to provide ourselves and what to source from the Foreign and Commonwealth Office (FCO). We will complete a detailed plan once the new charging arrangements have been settled.

2010/11 - 2012/13 figures are as per actual spend. Operating costs for 2013/14 are as per the approved allocation. Operating costs for 2014/15 are indicative allocations as staffing plans up to 2015 will be finalised as part of our on-going change plan process.

## 5) Delivery and Resources (continued)

### Efficiency savings

Delivering Programme Efficiencies		
Category	Details	Residual cost in the SR period £'000
Strategic Reprioritisation	Scaling back support to nation-wide programme on basic education, health and HIV (previous total value: £493 million)	£183 million
Further examples of Programme efficiency	Procurement efficiencies: use of output-based contracts, use of local companies (leading to reduced costs as well as improving the local consultancy market)	

Administrative Cost Savings Initiative	2011/12			2012/13			2013/14			2014/15	
	FTE	PAY £'000	Pay £'000	FTE	PAY £'000	Pay £'000	FTE	PAY £'000	Pay £'000	FTE	PAY £'000
Reduction in Consultancy Payments			10			8					
Reduction in Travel			9			6					
Reduction in Training											
Reduction in Estates & Property Costs						9					
Reduction in costs as a result of Office Restructuring	5.5	63	8	0.66	42		3	48	5	1	90
Other Reductions (staff related)											
<b>Total</b>	<b>5.5</b>	<b>63</b>	<b>27</b>	<b>0.66</b>	<b>42</b>	<b>23</b>	<b>3</b>	<b>48</b>	<b>5</b>	<b>1</b>	<b>90</b>

## 6) Delivering Value for Money

DFID India has taken steps to integrate and improve VFM across the programme, including developing a VFM strategy and action plan in November 2011, collating sectorial data on unit costs for large-spending programmes, putting VFM measures into log frames, holding office-wide discussions and reviewing experiences from other country offices (e.g. Nigeria). DFID India has undertaken all procurement under £5 million locally for several years. We will continue to use the shared DFID/FCO Procurement Unit as a key resource for obtaining VFM, particularly where we spend directly on contracted technical assistance services.

**Key actions:** The Head of Strategy Results and Communications will lead in implementing the VFM strategy, supported by the three Team Leaders and the Head of the Joint Procurement Unit. This requires three distinct VFM approaches adapted to different parts of our portfolio:

- **MDGs:** We will continue to draw on the best available evidence when choosing and appraising new interventions and recommending policy choices to partners. We will also develop more rigorous ways of assessing the 'value added' of UK funds when combined with the resources of our state partner governments and the Government of India; and the distinct contribution of the local and international technical advisory services that the UK provides. Where possible, we will make comparisons about the VFM of our support across sectors. We will continue to support partners' financial management and procurement systems, and steps to increase accountability and transparency - which will encourage more efficient use of money.
- **Private sector:** We are working to develop an appropriate methodology for assessing the VFM of pro-poor investment, learning from promising good practice among Fund Managers and Foundations. In addition to ensuring that investments generate a commercial return, we will seek ways to assess the direct development benefits of the UK's investment choices in terms of outputs, better quantification of outcomes and more reliable approaches to attribution. We will develop a framework for assessing the costs and benefits of our investment approach overall, taking into account the wider catalytic returns and indirect effects on poverty over time. Examining private sector governance, efficiency and fiduciary risk will be part of this.
- **Global and policy.** We are allocating staff time and financial resources to innovative activity that also yields results and developing robust approaches to determining VFM in policy and influencing activities and programmes. For example, we have designed a hybrid input/output model for a recent technical assistance contract, reasserting our ability to scrutinise and audit fees.

Our forward VFM Strategy and Action Plan will also address:

- **VFM and operating costs** – including the scope for shared approaches to administration cost efficiencies with the FCO on co-location; workforce planning that maximises resources for frontline delivery; and continuing our ambitious year-on-year Green Office targets, including monitoring energy costs closely.
- **VFM at various stages of project cycle management:** Business Cases, log frames, annual reviews, project completion reports and evaluations, as well as more effective use of output-based contracting in our programmes and mechanisms to incentivise our agents/partners to assess and report on VFM.
- **Skills, systems and structures** to institutionalise and reward a VFM culture, e.g. through staff performance management.

## 7) Monitoring and Evaluation (M&E)

### **Monitoring:**

DFID India's Senior Management Team will review progress against the **Results Framework** in this Plan annually (February), with support from the DFID India Results team and Senior Advisers. If milestone data are unavailable for certain results, alternate data sources and qualitative assessments of progress will be used. Remedial action to address slippages will be considered when updating this Plan. In designing **new projects**, we will emphasise baseline and milestone indicators and the use of quality data systems. Where possible, we will use standard project indicators: this will facilitate aggregate reporting, both within DFID India and corporately. Where standard indicators do not currently exist (e.g. private sector investment, innovative service delivery), we will develop and share appropriate indicators. We will institutionalise mechanisms to capture disparate **lesson learning** across the portfolio and use this to inform the design of new programmes. We will maintain DFID India's record of 100% timeliness for annual reviews over the last three years.

### **Evaluation:**

We are developing a forward looking evaluation strategy reflecting DFID India's commitments and priorities set out in the Operational Plan. At present, around 20 evaluations are at various stages of planning and implementation, including 10 impact evaluations and 10 programme evaluations. Overall, we plan to spend around 4% of our programme budget on evaluation, covering evaluation activity within projects as well as ex-post evaluations, commissioned evidence studies, joint evaluations and evaluation advisory services. We will:

- Strengthen evaluation governance to ensure integrity, ethical standards, and independence of evaluations;
- Embed evaluation early on in programme design and implementation for better evidence of attribution, value for money and impact;
- Build the evidence base for innovative delivery strategies, and communicate these to other parts of DFID;
- Use a new Framework Agreement to source quality impact evaluation expertise, reduce transaction costs and improve VFM;
- Continue our tradition of joint evaluation and co-financed studies with such partners as the World Bank;
- Adopt peer review and quality assurance mechanisms for all evaluation products to ensure these meet quality standards and are publishable;
- Seek to evaluate the effectiveness of DFID's work on policy dialogue and technical assistance.

### **Working with Partners:**

The **Government of India** (GoI) and state governments are pressing for better data sources and stronger evidence to inform policy-making and strengthen public accountability. At the request of GoI, we will support expertise-building in independent evaluation and fund policy-relevant studies. We will also support robust and gender disaggregated statistical surveys. We will also work collaboratively with technical **impact evaluation agencies and other donors** to share best practice, and promote the uptake of robust evidence in policy-making and practice. Through the revised log frame format, we will continue to ensure a greater buy-in from partner agencies and civil society organisations. This will include helping them to strengthen their M&E frameworks.

## 8) Transparency

Transparency is one of the top priorities for the UK Government. We will ensure that we continue to meet our commitments under the UK Aid Transparency Guarantee including publishing detailed information about DFID projects, including programme documents, and we will provide opportunities for those directly affected by our projects to provide feedback.

Transparency is critical in improving - and demonstrating - value for money to UK taxpayers at a time of increased pressure on public spending. To promote transparency, DFID India will meet all the commitments of the **UK Aid Transparency Guarantee** (ATG), including the International Aid Transparency Initiative (IATI). This includes: publishing more detailed, timely and comparable information on our projects; increasing accessibility and providing opportunities for people affected by our programmes to feed their experiences back to us; and pushing for full transparency from the partners we fund.

As part of IATI, we :

- Publish comprehensive details of all new projects and programmes in Plain English on our website, including agreements with partners, project summaries, log frames, annual review reports, project completion reports, evaluation reports, results, budgets and individual financial transactions over £500.
- Provide an opportunity for those affected by our projects to provide feedback through the DFID website public enquiry point, project websites and consultant websites.
- Make information more accessible to Indian citizens by publishing this plan in Hindi.
- Include messages on transparency in external communications.
- Support efforts to encourage DFID's multilateral partners to sign up to and meet the transparency standards set out in the IATI.

DFID has worked with Indian partners over the last decade to innovate and expand **new approaches to transparency and accountability** - from scaling up social audit (e.g. with Government of Andhra Pradesh) and citizen report cards (e.g. West Bengal urban programmes) to helping millions of India's poorest people understand and claim their rights and entitlements (e.g. Poorest Areas Civil Society Programme). We will build on this work. In addition, we will:

- Expand innovative initiatives on accountability that promote a smarter use of IT (e.g. daily SMS reports of poverty schemes by the Government of Bihar). In particular, we will work to connect citizens groups and state governments through IT to enable 'real time' debate about government performance.
- Work with our partners from civil society, the private sector and consultant organisations, encouraging them to adopt transparency standards in line with the International Aid Transparency Initiative (IATI).
- Reach an agreement with partners on the transparency standards we would like them to adopt and information we expect them to make available publicly. This agreement will be recorded in a clause in all new funding agreements, starting from April 2011.
- Introduce independent governance arrangements for evaluation.

# 9) Human Rights Assessment - India

DFID recognises that the realisation of all human rights underpins sustainable development. Through its development programmes, DFID aims to support civil society and governments to build open economies and open societies in which citizens have freedom, dignity, choice and control over their lives, and institutions are accountable, inclusive and responsive.

## Human rights context

- **Economic and social rights:** India is ranked 136<sup>th</sup> of 186 countries in the Human Development Index (2013). India has made progress on the right to an adequate standard of living and will meet the first MDG, by halving the proportion of people in poverty to under 30%. There is mixed progress on rights to education and health. India has achieved the MDGs for universal primary enrolment, and eliminating gender disparity in primary education; but drop-out rates are high, and access to secondary education remains poor. The indicators for access to safe drinking water are on track: but under-five, infant, and maternal mortality are all off track, as is access to sanitation. India acceded to the Convention on the Rights of the Child (CRC) in 1992, but expressed reservations to articles 32 and 33 which explicitly prohibit child labour. It is yet to ratify ILO conventions 138 (minimum age for admission to employment) and 182 (worst forms of child labour).
- **Non-discrimination:** India's rank on the Gender Inequality Index is 136<sup>th</sup> of 186 countries. Maternal mortality has reduced from 570/100,000 in 1990 to 230 in 2010. India's sex ratio at birth was 940 in 2011 (Census) - an improvement over 2001 (933) but still of concern. The 2011 census recorded women's literacy at 65.46% compared to 80% for men. According to India's 3<sup>rd</sup> National Family Health Survey, 37% of married women have experienced spousal violence, and rates are far higher in some states. India's Constitution recognises 'weaker sections' (specific Caste and Indigenous groups) and allows for affirmative action. To counter inequality, India uses reservations (in government colleges, jobs, electoral politics) for scheduled castes and tribes, though their development indicators continue to lag behind other groups. 33% of seats in local government are reserved for women. A Bill to introduce a 33% quota in the national parliament has been stalled. In 2009 the Delhi High Court took a landmark decision to decriminalize homosexual behaviour, a move which was warmly welcomed by civil rights groups and the LGBT community. The issue is now being challenged at the Supreme Court.
- **Civil and political rights:** India is a federal, multi party democracy. Regular elections are held at national, state, and local government level under the supervision of the Election Commission, and have generally been regarded as free and fair. In 2012, Freedom House assessed India as 'Free', but with press and internet 'partly free'. Freedom House states that "India's vibrant media scene is the freest in South Asia, although journalists, particularly those in rural areas and certain conflict-racked states, faced a number of challenges in 2011, including legal actions and occasional violence. The constitution provides for freedoms of speech and expression, and while there are some legal limitations, these rights are generally upheld". India's Right to Information Act (2005) has increased transparency in government. Recent debates on civil society freedom have focussed on the tightening of the Foreign Contribution Regulation Act (FCRA). In 2012 a large number of civil society organisations had their FCRA status suspended. The Universal Periodic Review (UPR) reported in May 2012 and in September 2012 the Government of India accepted 67 of the 169 recommendations put forward. As part of this process, the UK recommended that India expedite ratification of the UN Convention Against Torture. Implementation of recommendations will be reviewed at the next UPR process in 2016.

## Direction of travel

- Overall India is on a gradual, positive trend, but with considerable diversity between regions and between social groups.
- Social and economic rights are on a positive trend overall.
- Inequalities persist and result in uneven progress across regions and social groups. India's gender gap is closing, but slowly.
- Civil and political rights are generally stable.

## UK approach and focus

- The UK strongly supports positive trends on social and economic rights through programmes executed with government and civil society.
- We will continue efforts to address inequalities through on-going programmes in support of the most vulnerable groups; through a strong emphasis on women and girls; and a geographic focus on India's largest, poorest states and within these the poorest Districts.
- The UK raises concerns about civil and political rights with Government at all levels, both bilaterally and as part of the European Union.
- We will continue to work with the Indian Government and civil society to strengthen accountability institutions and mechanisms, building greater confidence amongst citizens to express opinions, and strengthen voice and accountability in service delivery, empowering Indian citizens to engage effectively with the state in pursuit of their rights.

# Annex A: Revisions made to Operational Plan 2012/13

DFID India recently updated our Operational Plan following the Secretary of State's November 2012 announcement that we have agreed to move to a new development relationship with India. This further revision is therefore fairly light touch.

On slide 5 (delivery and resources) we have:

1. Articulated how our aid instruments are evolving in India.
2. Articulated how our structured change programme will ensure the smooth transition of our bilateral programme.
3. Provided more detail about our pro-poor private investment, climate change and global programmes.

We have updated the figures as part of delivery and resources slides 5.2 and 5.3 to reflect actual spend for 2012/13, approved allocation for 2013/14 and indicative allocations for 2014/15.

We have added a new Human Rights Assessment and Anti-Corruption and Counter-fraud strategy slide as per the guidance.

We have also updated our headline results and results progress slide to reflect:

1. How cuts for our allocations for 2013/14 and 2014/15 have affected our predicted results.
2. Scrutiny of our methodologies, including ensuring we calculate the effect of our technical assistance according to the methodology specified centrally.

# Annex B: Results Progress

Pillar/ Strategic Priority	Indicator	Baseline (include year)	Progress towards results (include year)	Expected Results (include year)
Wealth Creation	Number of additional individuals reached with savings, credit, insurance, and number of firms reached with equity and loan guarantees as a result of DFID support (across 8 low income states)	0 individuals (2011)	The Poorest States Inclusive Growth Programme is in its first quarter of implementation. Results will become available from 2013-14 onwards.	<b>3 million women</b> between 2011-2015
Wealth creation	Number of new Public-Private-Partnership deals in infrastructure (across 8 low income states)	0 (2011)	Ten contracts awarded (2011-12 and 2012-13). Rate of progress likely to increase in 2013-14 and 2014-15.	<b>35 deals</b> between 2011-2015
Climate change	Number of additional people with access to low carbon energy (e.g. fuel efficient cook-stoves, solar lanterns) (across 8 low income states)	0 (2012)	560,000 (2011-12 and 2012-13) Target revised following cuts to DFID India allocations.	<b>0.8 million people</b> between 2011-2015
Health	Number of births delivered with the help of nurses, midwives or doctors	2.5 million (2011)	260,000 (2011-12 and 2012-13)	<b>340,000 births</b> between 2011-2015.
Nutrition	Number of pregnant women and under 5 children reached by nutrition programmes (in 8 low income States)	8.6 million (2011)	2.9 million (2011-12 and 2012-13)	<b>3.7 million people</b> by 2014/15 of which 2.7 are women.
Water and Sanitation	Number of people with sustainable access to an improved sanitation facility (in Bihar, Madhya Pradesh and Orissa)	26 million (2009)	490,000 (2011-12 and 2012-13)	<b>2.9 million people</b> by 2014/15.
School Education (Ages 15-16)	Number of girls and boys supported by DFID to enrol in basic education (ages 6-14)  Number of additional girls and boys enrolled in junior secondary school (ages 15-16).	185 million in 2010  28.2 million (2008) of which 12.3 million girls	830,000 of which 400,000 girls (2011-12) 370,000 of which 180,000 girls (forecast: 2012-13)  170,000 of which 80,000 girls (forecast: 2012-13) Good progress has led to us revise our predictions towards a higher expected result.	<b>835,000 children, of which 406,000 girls</b> (Peak year)  <b>800,000 students, of which 390,000 girls</b>
Governance	Number of women and men supported to have choice and control over their development and to hold decision-makers to account (in 8 low income states)	0 million (2011)	4.6 million of which 2.7 million (2011-12 and 2012-13)	<b>13 million additional people, of which 7.7 million women</b> between 2011-2015

\* These results may not be directly aggregatable with other country results due to different measurement methodologies
