These ‘non-prescriptions’ can be given to patients who do not need a prescription for antibiotics.
NO ANTIBIOTIC PRESCRIPTION NEEDED

Taking antibiotics for the wrong reasons, such as against colds or flu, has no benefit for you.

This is because:

- you probably have a viral infection
- antibiotics won’t work against colds or flu
- your infection should start to clear up in a few days.

You should now:

- drink plenty of fluids
- get some rest
- ask your pharmacist for advice about over-the-counter remedies to ease your symptoms, such as paracetamol.

Phone or visit the surgery for more advice if you are not getting better within a few days, or at any time if you are concerned about your symptoms.
