Subject: Re: ERA - Shale Gas Guidance

REDACTED we would very much like to see this and comment if possible please

However there is a more fundamental issue here as to how does this emerging ERA process driven by DECC tie legally in with the comprehensive EIA we have just committed to ad part of the local Planning Process. This needs discussing clarifying as the planning process already has a degree of complexity and ambiguity which this could very well accentuate leading to further delays whilst we work out who is responsible for what and when

Cranfield are nearing completion of the ERA guidance, we will be providing 'DECC' feedback this afternoon.

Once Simon Pollard has taken our comments on board we would like to run the final draft past you. Are you willing?

Personally I'd like to see Cranfield provide a simple summary 'Risk' template to ease the presentation of the risks as part of an exec summary to the ERA. This would enable any initial assessment of the risks to be compared with the residual risk following mitigation.... Very simple stuff to be honest. Would this be of use to you?

Regards
