The next issue, for April 2013, will be published on 25th April 2013.

A NATIONAL STATISTICS PUBLICATION

National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

For general enquiries about National Statistics, contact the National Statistics Public Enquiry Service on:

☎ : 0845 601 3034

overseas : +44 (1633) 653 599

minicom : 01633 812399

E-mail : info@statistics.gov.uk

Fax : 01633 652747

Letters : Customer Contact Centre, Room 1.101, Government Buildings,
Cardiff Road, Newport, South Wales. NP10 8XG

You can also find National Statistics on the internet at www.statistics.gov.uk

Note: Certain figures, mainly in Sections 1 and 2, do not fall under National Statistics. See the Introduction.

Introduction

What are tax credits?

Tax credits are a flexible system of financial support designed to deliver support as and when a family needs it, tailored to their specific circumstances. They are part of wider government policy to provide support to parents returning to work, reduce child poverty and increase financial support for all families. The flexibility of the design of the system means that as families' circumstances change, so (daily) entitlement to tax credits changes. This means tax credits can respond quickly to families' changing circumstances, providing support to those that need them most.

Tax credits are based on household circumstances and can be claimed jointly by members of a couple, or by singles. Entitlement is based on the following factors:

- age
- income
- hours worked
- number and age of children
- childcare costs
- disabilities

For further information about who can claim please refer to the HMRC website:

<http://www.hmrc.gov.uk/taxcredits/index.htm>

Tax Credits are made up of:

Child Tax Credit (CTC)

Brings together income-related support for children and for qualifying young people aged 16-19 who are in full time non-advanced education or approved training, into a single tax credit, payable to the main carer. Families can claim whether or not the adults are in-work.

Working Tax Credit (WTC)

Provides in-work support for people on low incomes, with or without children. A family will normally be eligible for WTC if it contains one of the following;

- a single person who is responsible for a child or young person and works at least 16 hours a week, or
- a couple who are responsible for a child or young person, and who jointly work 24 hours or more per week (NB. one adult must be working at least 16 hours).
- a person who is receiving or has recently received a qualifying sickness or disability related benefit and has a disability that puts them at a disadvantage of getting a job, and who works at least 16 hours per week, or
- a person is aged 60 or over and works at least 16 hours per week, or

If none of the above apply, then a person will still be eligible for WTC if they are aged 25 and over and work 30 hours or more a week.

CTC is made up of the following elements:-

- **Family element:** which is the basic element for families responsible for one or more children or qualifying young people.
- **Child element:** which is paid for each child or qualifying young person the claimant is responsible for
- **Disability element:** for each child or qualifying young person the claimant is responsible for if they get Disability Living Allowance for the child
- **Severe disability element:** for each child or qualifying young person the claimant is responsible for if they get Disability Living Allowance (Highest Care Component) for the child

Some out-of-work families with children do not receive CTC but instead receive the equivalent amount via child and related allowances in Income Support or income-based Jobseeker's Allowance (IS/JSA). These families are included in the figures, generally together with out-of-work families receiving CTC. In due course, they will be "migrated" to HMRC and paid via the tax credits system.

WTC is made up of the following elements:-

- **Basic element:** which is paid to any working person who meets the basic eligibility conditions
- **Lone Parent element:** for lone parents
- **Second adult element:** for couples
- **30 hour element:** for individuals who work at least 30 hours a week, couples where one person works at least 30 hours a week or couples who have a child and work a total of 30 hours or more a week between them where one of them works at least 16 hours a week.
- **Disability element:** for people who work at least 16 hours a week and who have a disability that puts them at a disadvantage in getting a job and who are receiving or have recently received a qualifying sickness or disability related benefit
- **Severe disability element:** for people who are in receipt of Disability Living Allowance (Highest Care Component) or Attendance Allowance at the highest rate.
- **Childcare element:** for single people who work at least 16 hours a week or couples who both work at least 16 hours a week and who spend money on registered or approved childcare

Tapering: is the amount of the award that will be reduced when the household income exceeds a given threshold. Tapering reduces WTC first and then CTC.

The amount of support an eligible family can receive (known as their *entitlement*) varies depending on their income and which tax credit elements they are eligible for. First, a family's maximum possible entitlement is worked out by adding up all the different elements of CTC and WTC they are eligible for (described on page 2).

A household's actual entitlement is then determined by tapering this maximum amount according to different thresholds. As demonstrated within the diagram below, families eligible for the WTC receive the full entitlement until their annual household income reaches £6,420, after which the amount of tax credits they receive is reduced by 41 pence for each £1 they earn beyond this threshold.

If a household is out-of-work and therefore eligible for the CTC only, they will receive the full entitlement until their annual household income reaches £15,860 (2012-13). After this point, the amount of tax credits they receive is again reduced by 41 pence for each additional £1 of income beyond this threshold (note that this is not shown on the diagram below).

Because of the range of possible eligibilities and interactions between the elements, both the maximum award and the shape of the above award profile will be different for every family with different circumstances.

Tax Credits are based on household income. The income used to calculate the award is based on the families' income from the previous tax year, or on their most recently reported circumstances in-year. A family's tax credits award is provisional until finalised at the end of the year, when it is checked against their final income for the year. This publication relates to a snapshot of tax credit support based on these 'provisional' tax credits awards.

What does this publication tell me?

The provisional awards are currently published at the end of April and December. These statistics are as close to real-time as possible and represent the picture as at the beginning of April and December. These are National Statistics and the month of publication is pre-announced a year in advance with the exact date being published in the preceding publication.

Each release consists of two publications: the main publication and the geographical publication. As only a sample of data is used, detailed analysis at the sub-geographical levels is not always possible. The statistics in this release include analysis at the following geographical levels:

- Country and English Region;
- Local Authority (LA);
- Westminster Parliamentary Constituency; and
- Scottish Parliamentary Constituency;

The main publication includes a Country and Region summary, with the geographical publication going to a lower level. This series has been produced bi-annually since the introduction of Tax Credits in April 2003.

Small Area Statistics

Estimates are also provided in a separate publication at Lower Super Output Area and Data Zone for England, Scotland and Wales. These statistics are available

here: <http://www.hmrc.gov.uk/statistics/fin-small-stats.htm>

The small area statistics are based on the finalised award position, but using a family's circumstances as at 31st August rather than as an average across the year. This ensures that the statistics are directly comparable to other published small area statistics, such as Child Benefit.

Who might be interested?

The statistics contained in this publication will be of interest to anyone who is looking for the latest possible data on Tax Credits. Specifically, there are aggregate statistics on who is getting what level of tax credits support as well as breakdowns by various sub-categories - e.g. family composition, family income, work status, and geographical analyses. It may be of interest to academics, thinktanks, political parties interested in the twin aims of Tax Credits: eradicating child poverty and improving work incentives. Equally, it may be of interest to people considering wider questions on government support systems and/or others designing benefit systems. Finally, the geographical analyses might be of interest at the more local level, giving some indication of the level of government support in each Region/Local Authority level.

Which publication should I use?

Generally, if you are content with less timely statistics, use the finalised awards data publication. If you are more concerned with getting the latest up-to-date information that may not align exactly with finalised data further down the line, use the provisional awards data. Sticking to the finalised award data will also mean the figures will align with other published data on Tax Credits such as information in HMRC's Departmental Accounts.

Provisional awards vs finalised awards

It is important to recognise that the finalised awards statistics are not a revision of the provisional statistics. The provisional numbers relate to the caseload position at a snapshot point in time, based on the family circumstances we have been informed of by each family prior to that particular time. The finalised awards relate to the complete retrospective picture for the year, based on a finalised view of family incomes and circumstances. The caseload population will be different between the two publications as a result of HMRC knowing the complete finalised picture of the award.

At the start of the year, the tax credit award will be a provisional award reflecting the reported circumstances as at 6th April (the start of the tax year). Over the course of the year, a family's circumstances may or may not change. As and when a family's circumstances change, the provisional award is updated each time with the latest set of circumstances and a new provisional award re-calculated. It is only at finalisation (usually four to nine months after the end of the tax year) that the family's circumstances for the whole year are known and a finalised award can be calculated. As a result, the finalised award statistics are not available until around 12 months after the end of the entitlement year in question. Given this lag in availability of data, there is some value in looking at a snapshot of families' circumstances at any given time to give some indication of the level of support one might expect to see subsequently at finalisation.

To illustrate the difference, let us look at a family that has one change of circumstance throughout the year, moving from in-work to out-of-work in January of any one year:

The snapshot data looking at the provisional award in December will model entitlement for the whole year on the basis that the family is in-work for the whole year (since we do not know about the move out-of-work at that time). It is not until finalisation - and thereby in the finalised award data publication - that the family's entitlement will be modelled on the basis of 9 months in-work and 3 months out-of-work.

So the figures for provisional awards are more up to date, but are subject to retrospective change. The sizes of these changes can be seen by comparing the data for selected dates in finalised awards with data published earlier on provisional awards at the same snapshot dates. The provisional award data tables classify families according to the levels of their entitlement at the reference date, modelled from data on their circumstances and their latest annual incomes reported and processed by that date. The actual amount being received at that date can be lower, due to the recovery of earlier overpayments. The tables describe as "recipients" all families with positive modelled entitlement, though in some cases the payments are reduced to zero. For more details, see the Technical Note.

What information do the tables contain?

CTC and WTC are claimed by individuals, or jointly by couples, whether or not they have children (described as "families" in this publication). These tables cover families who had claimed, and were eligible for, CTC (or the equivalent via benefits) or WTC at 1 December 2012 (the "reference date") and who were recipients at that date.

From April 2007, the tables exclude families whose modelled entitlements are tapered to zero due to their income levels. These families were originally included because they may, retrospectively, have positive entitlements at finalisation. However, this is no longer at all likely for the majority of such families. Their numbers have been swelled by families whose youngest children have left full time education, who continue to satisfy the qualifying conditions for WTC (see above), but whose incomes are sufficient to taper the WTC entitlements to zero.

The tables in Sections 3 and 8 include out-of-work families with children; and the figures for such families in Sections 1 and 2 are shown with the same degree of rounding as the figures for in-work families, and are classed as National Statistics. This follows the previous addition of a further data source for out-of-work families receiving their child support via benefits (see Technical Note).

Tables 8.2 and 8.3 from the main publication give a Country and English Region summary which includes the number of families receiving CTC & WTC or CTC Only, as well as the number of families benefiting from help with childcare, respectively.

Out-of-work families

A family is defined as being out-of-work at the reference date if there is no adult working for 16 hours or more per week. In addition it includes couples with children who jointly work less than 24 hours per week. These families can fall into two categories:

- 1) Families administered by HMRC who are receiving their child support through CTC
- 2) Families administered by DWP and claiming their child support through benefits

Child Tax Credit was introduced in April 2003 and any application since then falls under 1), whereas families who were receiving out-of-work benefits prior to April 2003 and remain so will fall under 2) – with a policy to eventually migrate all out-of-work cases over to HMRC in time. Therefore, out-of-work caseload numbers falling under 2) is an ever decreasing population.

Since April 2007 the out-of-work estimates have been classified as National Statistics, a significant change in the process of identifying and quantifying this population was introduced from this date and is detailed in the Technical Note.

Changes that affect this publication

A number of policy changes that affect Tax Credits were introduced on 6th April 2012 as part of the Coalition Government's announcements in the June 2010 Budget and the 2010 Spending Review. These include:

The removal of the second income threshold;

The introduction of a disregard for income falls, at £2,500;

A new working hours condition for couples with children. At least one adult must work 16 hours or more per week, and their combined working hours must be 24 hours or more in order to be eligible for WTC.

The abolition of the 50+ elements.

The removal of the second income threshold means that most families that used to receive the Family Element or less are no longer entitled to receive anything. As a result some categories in this publication have been changed. The previous distinction between In-work families receiving 'More than the Family Element' 'the Family element' and 'Less than the Family Element' has been removed, and will now be referred to as 'CTC Only'.

User Engagement

Bespoke analysis of tax credits data is possible although there may be a charge depending on the level of complexity and the resources required to produce. If you would like to discuss your requirements, to comment on the current publications, or for further information about the tax credits statistics please use the contact information at the beginning of this publication, or from the HMRC website:

<http://www.hmrc.gov.uk/statistics/contacts.htm>

We are committed to improving the official statistics we publish. We want to encourage and promote user engagement, so we can improve our statistical outputs.

We would welcome any views you have using the link to the feedback form below. We will undertake to review user comments on a quarterly basis and use this information to influence the development of our official statistics. We will summarise and publish user comments at regular intervals.

<http://www.hmrc.gov.uk/statistics/feedback.htm>

National Statistics Review

A formal review of our National and Official Statistics publications was held between May and August 2011. Over 130 responses were received from a broad range of users.

A report summarising the responses received has been published, with a final report identifying the future proposals being published during 2013.

<http://www.hmrc.gov.uk/statistics/tc-stats-results.htm>

Sampling uncertainty

The figures are subject to sampling uncertainty. Figures based on fewer than 25 cases are shown as "-". For more details of the sample, and the sampling errors associated with the figures in the tables, see Appendix B.

Summary of main aggregates

Table 2.1 shows that, on 1 December 2012:

4.7 million families, containing 7.8 million children, were tax credit recipients or were receiving the equivalent child support through benefits;

These families comprised:

4.1 million families with children receiving CTC, or the equivalent via benefits:

1.5 million in which no adult was in-work

1.8 million in-work receiving the maximum CTC, and also receiving WTC

0.8 million in-work receiving CTC only

0.5 million families in-work without children, receiving only WTC.

2.1 million recipient families were couples (1.9 million had children).

2.6 million were single adults (2.2 million had children).

Later tables show that:

430 thousand families were benefiting from the childcare element of WTC; they were receiving an average of £59 per week help with their childcare costs;

115 thousand families were benefiting from the disabled worker element of WTC;

Note: Figures are separately rounded, which can lead to the components as shown not summing to the total.

List of tables

Section 1 : Time series

- Table 1.1 Families receiving CTC or WTC, or with children and receiving out-of-work benefits, July 2003 to December 2012.
- Table 1.2 Time series of number of families and children, and of selected tax credits elements received by families, December 2004 to December 2012.

Section 2 : Summary tables

- Table 2.1 Recipient families, couples and single adults and their children, 1st December 2012.

Section 3 : Age, gender and children of recipient families

- Table 3.1 Recipient families: age and gender of adults.
- Table 3.2 Recipient families with children, by family size; ages of children.

Section 4 : Hours worked and childcare of in-work recipient families

Section 8 : Regional analysis of recipient families

Figure 8.1 Number of families receiving different amounts of tax credits by country and English region, December 2012

Section 1 : Time series

Section 1 provides statistics on the history of the Tax Credits system, between December 2004 and December 2012. This enables comparison across time, across different Tax Credits populations and describes how various parts of the system have changed over time.

Figure 1.1 shows that the overall numbers of families receiving tax credits had remained broadly level at around 6.0 million since December 2004, increasing to around 6.3 million in December 2010. By December 2012, the number of families receiving Tax Credits had dropped to 4.7 million primarily as a result of policy changes, set out on Page 6. In particular the reduction in the second income threshold means that there are no longer any families receiving only the Family Element, and therefore this category has been discontinued. Within this population, the composition of the Tax Credits population has changed over time and will continue to do so.

The number of families receiving relatively high awards - that is in-work families receiving WTC and CTC - have risen from around 1.5 million in December 2004 to 2.0 million in December 2010, but has fallen to 1.8 million in December 2012. There were 845,000 in-work families receiving CTC only in December 2012. This figure is not comparable with previous values because it includes families that have been re-categorised as a result of the policy changes introduced since April 2012. Numbers of in-work families without children - receiving WTC only - had been increasing steadily since December 2004, rising from 240,000 to 570,000 in December 2011, but has now fallen to 540,000.

The numbers of families receiving tax credits when out-of-work has remained at about 1.4 million since December 2010.

Figure 1.1: Numbers of families receiving different amounts of tax credits

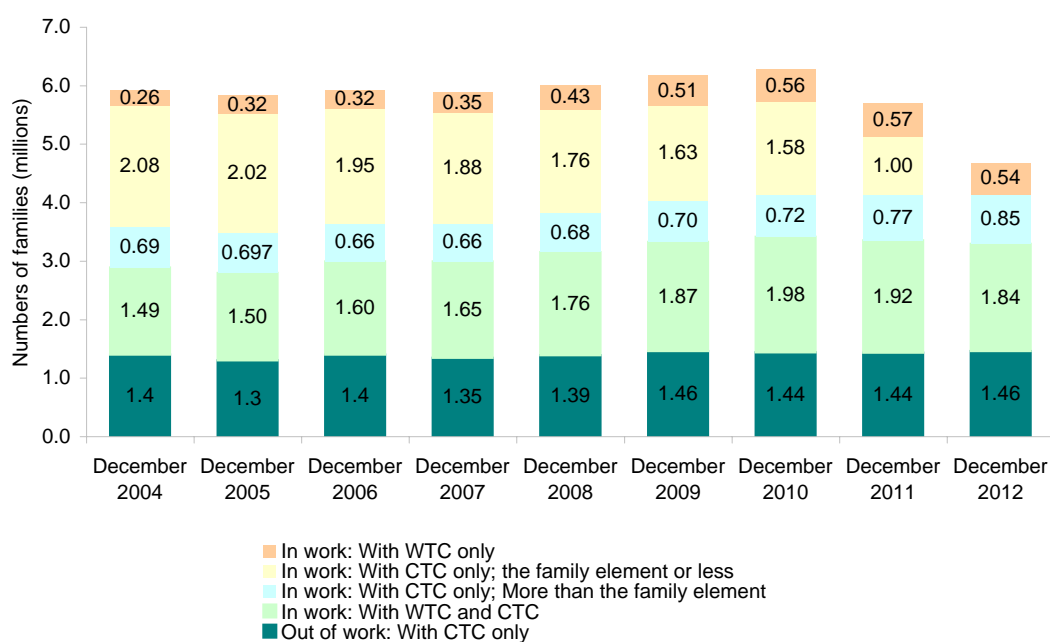

Figure 1.2 shows that the number of families without children receiving WTC-only has risen over time, more than doubling from 235,000 in April 2004 to around 548,000 in April 2010. Since then it has been on a downward trend, and was 541,000 in December 2012.

Figure 1.2: Numbers of families receiving WTC-only (working families with no children)

Figure 1.3 shows that the number of families benefiting from the childcare element has consistently risen over time, from 318,000 in April 2004 to around 493,000 in April 2011. However since April 2011 the number of families benefiting has fallen to 430,000 at December 2012; one cause of this reduction is the policy changes introduced since 6th April 2011.

Figure 1.3: Numbers of families benefiting from the childcare element

N.B. This figure is not derivable solely from the statistics in this publication. It includes information from previous releases of the provisional award data publications.

Table 1.1 : Families receiving CTC or WTC, or with children and receiving out-of-work benefits, July 2003 to December 2012.

1 Apr 2010	1,492	1,910	718	1,635	548	4,811	6,304	
1 Dec 2010	1,441	1,975	723	1,579	561	4,838	6,279	
3 April 2011	1,470	2,002	737	1,581	591	4,911	6,381	
1 Dec 2011	1,435	1,922	774	1,000	566	4,262	5,697	
1 Apr 2012	1,474	1,934	793	984	582	4,294	5,768	
1 Dec 2012	1,463	1,837	845		541	3,223	4,686	

Note: Between each April and December families' awards are stopped (a) at 31 August if their only qualifying child falls out of entitlement at that date, or (b) in the autumn if they fail to return their Annual Declaration for the previous year. This introduces some seasonality into the figures.

Note: For each date, these data describe awards current at that date, based on incomes and circumstances reported and processed by that date. The publication "Child and Working Tax Credits Statistics. Finalised awards" gives retrospective figures based on later information, including in particular incomes and other details reported during the following tax year at finalisation.

¹ For dates up to December 2006, these numbers do not fall under National Statistics. They include both such families receiving CTC and other families with children receiving the equivalent level of child support through out-of-work benefits. Estimates of the latter are based on numbers at various dates up to May 2006, interpolations to the reference dates and a forecast for December 2006, and are therefore heavily rounded. See the Introduction.

Table 1.2 : Time series of number of families and children and of selected tax credits elements received by families, December 2004 to December 2012.*Thousands, unless otherwise stated*

Note: Between each April and December families' awards are stopped (a) at 31 August if their only qualifying child falls out of entitlement at that date, or (b) in the autumn if they fail to return their Annual Declaration for the previous year. This introduces some seasonality into the figures.

Note: For each date, these data describe awards current at that date, based on incomes and circumstances reported and processed by that date. The publication "Child and Working Tax Credits Statistics. Finalised awards" gives retrospective figures based on later information, including in particular incomes and other details reported during the following tax year at finalisation.

¹ Qualifying criteria are such that in some cases only families receiving certain tax credits are entitled to claim for for the additional elements, therefore when trends are shown due consideration needs to be made of the profile breakdown provided in the individual publications.

² The Baby Element was abolished from 6th April 2011.

Section 2 : Summary tables

Section 2 provides summary information on the tax credits population at December 2012 at the higher level of aggregation. Sections 3 - 8 go into more detailed breakdowns.

Figure 2.1 shows that the majority of lone parent families with children receive either the full award of CTC (when out-of-work) or WTC and CTC (when in-work). The number of in-work couples receiving WTC and CTC is similar to the number who are in-work and receiving CTC only. A majority of families with no children (receiving WTC only) are single recipients.

Figure 2.2 shows that 31% of families in receipt of tax credits are out-of-work families (30% receiving CTC and 1% receiving family premia in benefits) with the remaining 69% of families in receipt in-work families. Within this, 39% of families in receipt are receiving the higher value awards (WTC and CTC), 18% are receiving CTC-only, and the remaining 12% are in-work families with no children (receiving WTC-only).

Figure 2.2: Recipient families: proportion of families receiving each type of award

Table 2.1 : Recipient families, couples and single adults and their children, 1st December 2012

	Families			Number of children in recipient families
	Singles	Couples	Total

Total no Children (receiving WTC only)	388.2	152.8	541.0	-
Total In-work families	1,530.1	1,692.5	3,222.6	4,978.2
All families				
With children	2,195.3	1,949.6	4,144.9	7,779.2
Other	388.2	152.8	541.0	-
Total All families	2,583.5	2,102.5	4,685.9	7,779.2

¹ Where the award is not reduced through tapering, either because the family is passported to maximum CTC through receipt of out-of-work benefits, or because the annual income is below the relevant first threshold. See the Appendix A.

² See the Introduction. Not tapered.

³ Includes 75.5 thousand families (44.6 thousand couples and 30.9 thousand singles) where the WTC entitlement is less than or equal to the childcare element and is therefore paid together with CTC.

Section 3 : Age, gender and children of recipient families

Section 3 focuses on the demographic make up of the tax credits population. In particular, it looks at the age and gender of the adults in the family as well as the number and age of children in each family.

Figure 3.1 shows that singles/lone-parents and couples are typically in the age range 40-49; the next largest category being the 35-39 age range. On the whole the age distribution for singles/lone parent families is younger than that of couples.

Figure 3.2 shows that the overwhelming majority of families with children are made up of either one or two children with single parent families more likely to have one child than couples. Couples are more likely to have larger family sizes. There are 81,000 families with 5 or more children.

Figure 3.3 shows that lone parents tend to have older children than their couple counterparts. Almost half of children of lone parents are aged 10 and over, compared to around 40% of children of couple families. Although the number of couple families is higher than the number of lone parent families, lone parents have more qualifying young children aged 16 and over.

¹ For large families, not all dates of birth were copied to the data base used to produce these figures.

Section 4 : Hours worked and childcare of in-work recipient families

Section 4 focuses on the in-work recipient families with breakdowns on the numbers of hours worked per week and the number of families benefiting from the 30-hour element. It also covers childcare-related breakdowns such as the numbers of families benefiting from the childcare element, the hours worked per week, the age distribution of the children, and detailed breakdowns of the costs.

Figure 4.1 shows the number of weekly hours worked by the main-worker in in-work families in receipt. The overwhelming majority of main-workers in a couple family are working full-time (or the equivalent of 35 hours or more). Single parent families are more evenly split, with a narrow majority working 30 hours or more, and 16-23 hours being the next most likely work pattern.

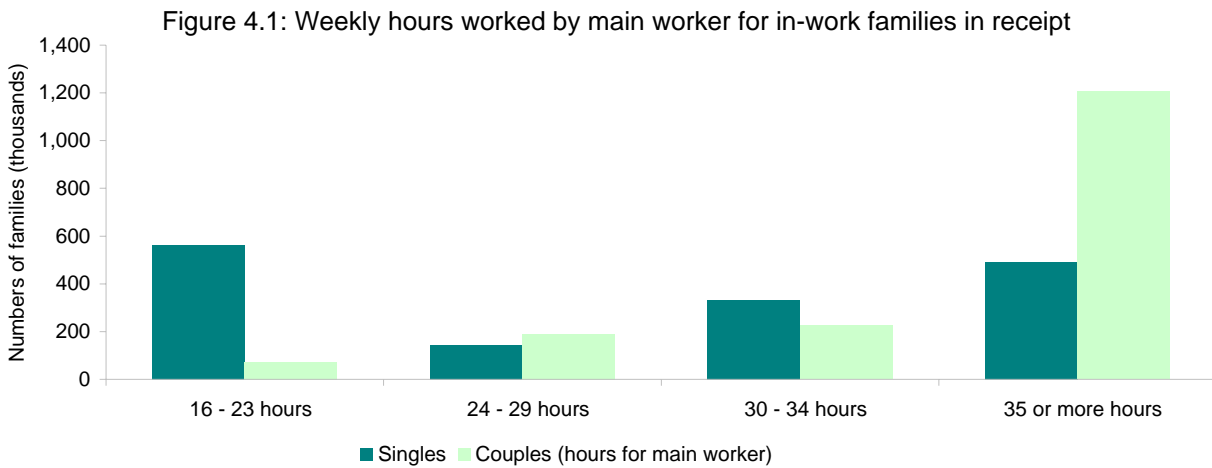

Figure 4.2 shows the average weekly help with childcare costs for single parent, couple, and all families. The costs are broadly split across the cost bands for each of the categories mostly reflecting the range of different numbers of hours childcare provision is claimed for. Many families have childcare costs of £150 per week and over, however there is also a large cluster with costs of £20-£39.99 per week.

Section 5 : In-work families benefiting from disability elements

Section 5 focuses on families that are benefiting from the disability elements - that is the disabled worker element, the severely disabled adult element, the disabled child element and the severely disabled child element. There are breakdowns of the family size and the numbers of hours worked by those benefiting as well as breakdowns on overlapping disability/childcare elements.

Figure 5.1 shows the number of individuals benefiting from the disability elements. There are 116 thousand disabled workers, 157 thousand disabled children, 29 thousand severely disabled adults, and 58 thousand severely disabled children in benefiting families.

Figure 5.1: Numbers of individuals benefiting from the disability elements

[†] Those with the severely disabled child element and with a positive award.

Section 6 : Annual incomes of in-work recipient families

Section 6 describes the distribution of incomes used to taper awards for families in receipt. This is also broken down by the type of income reported - i.e., whether the award is based on the family's previous year's income ('PY' income), the family's current year income ('CY' income), and whether the income disregards has been applied.

Figure 6.1 shows that the vast majority of families receiving tax credits have incomes under £30,000, although the majority of support going to families on incomes of £10,000 or less. Broadly speaking, the higher the income used to taper the award, the fewer the numbers of families in receipt - reflecting the targeted approach to financial support in-built in the Tax Credits system. When compared with previous provisional publications there are substantially fewer families receiving tax credits with income of £30,000 or over, this is a result of the policy change to remove the second income threshold shown on Page 6.

Figure 6.1 Income used to taper awards: in-work recipients

	Range of income used to taper awards							Total
	Up to £6,420	£6,421 to £9,999	£10,000 to £19,999	£20,000 to £29,999	£30,000 to £39,999	£40,000 to £50,000	Over £50,000	
With children

Over £2,500 lower than PY income								
of which increasing award value	9.1	28.3	93.2	59.7	13.1	0.9	-	204.2
of which not affecting award value ²	2.7	0.3	0.6	0.3	-	-	-	3.9
Over £10,000 above PY income								
of which reducing award value	-	6.8	17.8	11.0	3.6	0.5	-	39.7
of which not affecting award value ²	12.4	-	-	-	-	-	-	12.6
Total where CY income is used	24.2	35.4	111.7	71.0	16.7	1.4	-	260.4
Total in-work recipient families	773.6	582.2	1,116.6	578.0	156.5	14.3	1.4	3,222.6

¹ "PY income" is income in 2011-12; "CY income" is estimated income in 2012-13. CY income will be used to taper the award if it rises or falls by more than the income disregards. This is explained in more detail in the Technical Note.

² Even if CY incomes is used to taper an award, the amount of entitlement may not change if it is already at its maximum.

³ This includes 1,586,000 families whose CY income is greater than PY income due to auto-inflated income

Five or more children	41.4	13.3	-	54.7
Total All families	1,426.9	613.3	167.5	2,207.7

¹ For in-work families, those with annual incomes for tapering up to the first income threshold (£6,420). For out-of-work families, those receiving Income Support, income-based Jobseeker's Allowance or Pension Credit, plus other families with annual incomes for tapering up to the threshold for those entitled to CTC only (£15,860). Ignores any income reduction to benefit entitlement for those receiving their child support via benefits.

Section 7 : Payments to in-work families

Section 7 details the chosen payment frequency for families in receipt, broken down by family status and gender of the adults. Tax Credit recipients are able to choose whether they are paid in weekly or 4-weekly intervals.

Figure 7.1 shows that families tend to choose weekly CTC payments rather than four-weekly payment cycles. The vast majority of CTC payments are paid to the female parent. Lone parents are more likely to have weekly payments, whereas couples have a more equal preference.

Figure 7.1: Chosen frequency of payment: in-work families of CTC

¹ The main carer of the children, as nominated in the claim. See the Technical Note.² As chosen in the claim. This table, as all others, includes as "recipients" families where adjustments to modelled awards, made to eliminate or minimise prospective overpayments for the year, have reduced to zero the actual rate of payment at the reference date. See the Technical Note.³ The data giving the frequency for these families were not copied to the data base used to produce these tables.⁴ Couples where the two partners work the same number of hours.

Section 8 : Regional analysis of recipient families

Section 8 details the numbers of families in receipt with a regional breakdown. There are detailed breakdowns of the level of support provided in each region, the numbers of families benefiting from the childcare element as well as the disabled worker element and disabled child element.

As seen in figure 8.1, the region with the highest numbers of tax credits recipients is London, closely followed by the North West and then the South East. The region with the lowest numbers of tax credits recipients is Northern Ireland followed by the North East of England. Within the overall figures, the highest number of families on the higher awards - those receiving WTC and CTC - are from London followed by the North West. The highest number of out-of-work families in receipt are in London followed by the North West. This takes no account of the size of the population that are eligible for tax credits so one should be careful when drawing inferences from these results.

Figure 8.1: Numbers of families receiving different amounts of tax credits by country and English region

Table 8.1 : Recipient families; combination and level of payment by country and English region.

¹ Families with the relevant element and with a positive award.

² Families with the disabled worker element and with positive WTC awards.

³ The difference between the award and the notional award excluding the childcare element.

⁴ Including foreign and not known.

Appendix A: Technical Note

Current entitlement

There is a single claim form covering both Child and Working Tax Credits, and entitlement is calculated jointly. Awards run to the end of the tax year, and are based on the element values, thresholds, etc shown at Appendix B.

An annual award is calculated by summing the various elements to which the family is entitled. Unless the family is receiving Income Support, income-based Jobseeker's Allowance or Pension Credit, this sum is reduced if the family's annual income (see below) exceeds the relevant income threshold. The reduction is 41 per cent of the excess over the threshold.

Annual income and tapering of awards

For 2012-13 awards, the initial calculation of a family's entitlement is based on its relevant income in 2011-12, which is reported for the final calculation of the 2011-12 award or on the claim form. Relevant income comprises gross annual taxable income from social security benefits (except pensions) and from employment or self employment, less pension contributions; plus annual income from savings, property, state and private pensions and other sources (but excluding maintenance) in excess of £300. For claims by couples, entitlement is based on their joint annual income.

Final entitlement for 2012-13 is based on 2012-13 income if that is more than £2,500 lower than the income in 2011-12, or exceeds it by more than £10,000. However, the first £2,500 of a fall in income or the first £10,000 rise in income in 2012-13 is disregarded in calculating the tax credit due for that year. The family can report an estimate of its income in 2012-13 at any time, and the award will be recalculated using this income. After the end of the year the award is finalised when the 2012-13 income is known.

Changes of circumstances

A family's circumstances (number of children, hours worked, childcare costs, disabilities etc) can change within the year. To calculate the annual award, the year is then split into the periods between which the family's circumstances changed. Entitlement is calculated for each period, based on the annual values shown in Appendix B but scaled down to the number of days in the period. The rate of entitlement attributed to each case for this publication is that for the period spanning the reference date.

¹ *Some families were not required to report their 2011-12 income, but only to notify HMRC if it differs sufficiently from the latest reported income to affect the level of entitlement. For these cases the latest reported incomes have been taken as proxies for 2011-12 incomes.*

Backdating

Initial claims can be backdated by up to one month. Changes of circumstance that can potentially increase the value of awards are backdated to when they occurred, or to a date one month before they were reported, whichever is later. Changes that can potentially reduce the value of awards are backdated to when they occurred. However, none of these backdated changes affect the figures in these tables, which are for the reference date and based on information taken into account by the reference date.

Receipt of CTC and WTC awards, and level of CTC

The rate of receipt attributed to each sample family for these tables is the entitlement modelled using the information on circumstances and income taken into account by the reference date.

This may not equal the actual amount being received. This can be reduced to eliminate or minimise prospective overpayments for the year, or to recover previous years' overpayments (overpayments can arise when backdated changes of circumstances that reduce awards, or higher incomes, are reported).

Families without children can only receive WTC. Out-of-work families with children can only receive CTC. The maximum award (before tapering) of in-work families with children includes both WTC and CTC. The tapering is deemed to reduce WTC first, so families for which the reduction through tapering exceeds the modelled level of WTC are shown as receiving CTC only.

Payees in couples; and frequency of payment.

For couples, CTC (plus any WTC up to the level of the childcare element) is paid to the main carer of the children, as nominated in the claim. WTC (in excess of any childcare element) is paid to the adult working for at least 16 hours per week. If both work for at least 16 hours per week then the couple can nominate the payee.

Families are asked to choose between weekly and four-weekly payment of CTC and WTC (separately).

Main-worker

This is defined as the adult working the most hours.

Civil partnerships

Couples in civil partnerships can claim tax credits as couples. Such couples are included as normal in the tables showing families according to the gender of the main earner, or of the recipient of CTC.

Data sources

The estimates in the tables for in-work families are based on data for a random sample of families with awards at the reference date, extracted from the tax credits computer system on that date.

The estimates for out-of-work families with children are based on data at 1 December 2012. The estimates for families receiving CTC at that date are based on a scan of the tax credits system taken at that date. The estimates for families receiving their child support via benefits are based on scans of the benefits systems. These identified all families with children receiving benefits at August 2008. The estimates are restricted to families that had qualifying children in Child Benefit awards at August 2012 and were not claiming tax credits at 1 December 2012. However, the split shown at Table 2.1 of out-of-work families between those receiving their child support via each system takes account of the estimated movement in the split by 1 December 2012.

Note that this method works because families receiving their child support via benefits can have moved to CTC between August 2008 and December 2012 (for example, when they move into work), but movement in the opposite direction is not possible. Also, since April 2004, all new families receive their child support via CTC, not benefits. An aggregate allowance has however been made for the relatively small number of babies born between August 2008 and December 2012 to families receiving their child support via benefits at the latter date.

Appendix B: Sampling method and sampling error

The tables are based on a random sample of families receiving CTC or WTC at the reference date. The sample comprises 10 per cent of such single adults (with or without children) and 20 per cent of such couples. Each figure in the tables is derived by weighting the relevant sample cases by the inverses of these sampling fractions¹.

The figures in the tables are therefore estimates, but we know how accurate they are. For example, suppose that there are 100,000 couples with a characteristic. This number is not known, and we are to estimate it via the sample. Each couple is sampled with a probability of 0.2. Statistical theory says that there is a 95 per cent probability that the number sampled will lie between 19,752 and 20,248, and that the resulting estimate will lie between 98,760 and 101,240. At least approximately, then, where an estimate of 100,000 is derived from the sample, the true figure lies between these figures, with a 95 per cent probability. That is, the "95 per cent confidence interval" for the estimate is the estimate itself plus or minus 1,240.

The width of the confidence interval varies with the size of the estimate and the sampling fraction, as shown in the table below. For estimates that comprise a mixture of couples and single adults, the figures will lie between the two sets shown, according to the mix.

Confidence intervals for estimates of recipient families				
Estimated value	95% confidence interval		As % of the estimate	
	Couples	Single adults	Couples	Single adults
'000	'000	'000		
1	± 0.1	± 0.2	± 12%	± 19%
2	± 0.2	± 0.3	± 8%	± 12%
5	± 0.3	± 0.4	± 6%	± 8%
10	± 0.4	± 0.6	± 4%	± 6%
25	± 0.6	± 0.9	± 2.5%	± 4%
50	± 0.9	± 1.3	± 1.8%	± 2.6%
100	± 1.2	± 1.9	± 1.2%	± 1.9%
250	± 2.0	± 2.9	± 0.8%	± 1.2%
500	± 2.8	± 4.2	± 0.6%	± 0.8%
1,000	± 3.9	± 5.9	± 0.4%	± 0.6%

¹ Each case is further weighted so that the overall total equals an independent count of families with awards.

Minimum award payable	26	26	26	26	26	26	26	26	26	26

¹ Payable to families for any period during which they have one or more children aged under 1.

² Payable for each child up to 31 August after their 16th birthday, and for each young person for any period in which they are aged under 20 (under 19 to 2005-06) and in full-time non-advanced education, or under 18 and in their first 20 weeks of registration with the Careers service or Connexions.

³ Payable in addition to the child element for each disabled child.

⁴ Payable in addition to the disabled child element for each severely disabled child.

⁵ Payable for any period during which normal hours worked (for a couple, summed over the two partners) is at least 30 per week.

⁶ Payable for each qualifying adult for the first 12 months following a return to work.

⁷ Income is net of pension contributions, and excludes Child Benefit, Housing benefit, Council tax benefit, maintenance and the first £300 of family income other than from work or benefits. The award is reduced by the excess of income over the first threshold, multiplied by the first withdrawal rate.

⁸ For those entitled to the Child Tax Credit, the award is reduced only down to the family element, plus the baby addition where relevant, less the excess of income over the second threshold multiplied by the second withdrawal rate.

⁹ Those also receiving Income Support, income-based Jobseeker's Allowance or Pension Credit are passported to maximum award with no tapering.

¹⁰ Introduced from 6 April 2012, this drop in income is disregarded in the calculation of Tax Credit awards.
