

Dear Mr. Cameron,
Consultation on the Review of the Siting Process for a Geological Disposal Facility.

I'm deeply concerned that this Review would result in completely removing the right of local people to have a say in this vitally important issue which seriously affects our local area, including a very strong likelihood of long term, irreversible damage to the health of the land and local people.

I have been an Ecologist for almost 30 years & have deep concerns about the existing proven detrimental environmental impacts of producing the nuclear energy and waste in the first place. Cumbria County Council's seriously considered decision to reject this waste disposal facility was strongly supported by the majority of local people. Please consider what the long term impacts are likely to be, and reconsider this Review. Respect for the views of others, particularly local people on issues which affect their local area - is surely the basis of democracy.
