#### Key Actions for Farmers Relating to Water Management

Introducing our new theme based, best practise approach to our work with the agricultural industry. We ask our staff, farm advisors and farmers to work together to:

- Manage your nutrients well
- Manage your soil sustainably
- Manage your water use effectively and plan for your longer term water needs

- Manage your livestock so they do not freely access watercourses
- Use pesticides efficiently and dispose of them carefully

We hope that this simple approach will help farmers understand the key things we'd like them to do, why this is and how it will benefit their businesses. We will use these themes in future newsletters to signpost the key objective of any advice and guidance. The themes are summarised in a short leaflet which we will be giving out at events for farmers and farm advisors. Electronic copies are available for use by advice delivery partners. Please [email us](#) if you would like a copy of the leaflet.

### Nitrate Vulnerable Zones update

In November 2013, the NVZ guidance document was updated to reflect the final outcomes of farmers' NVZ appeals since June 2013. It also clarifies sections of the guidance queried by stakeholders since June 2013 and corrects minor typographical errors.

In addition to the revised guidance, Defra has produced a file of user-friendly blank tables from the guidance. The file allows you to use the tables you need and, for some tables, avoids printing text surrounding them in the NVZ guidance. They can be printed after their completion onscreen or before for manual completion. See [GOV.UK](#) to view the updated guidance and tables.

### Joint Government and Industry Slurry Storage and Management Project

In November 2013 Defra published a report that presented the findings and recommendations of an Industry Working Group set up to review the management of slurry in England. The Group included the key organisations representing farmers. Using the latest available evidence they examined current legislation, enforcement, advice available and capital issue before submitting their recommendations to Ministers for approval. As previously promised by Government, they paid particular attention to Closed Periods within NVZs and feasibility of introducing flexibility by tailoring dates to local conditions. They concluded that the current evidence does not support flexible closed periods at this stage but Defra will revisit this if the evidence base changes. The full report can be viewed on the [GOV.UK](#) website.

### Water Abstraction

The reporting documents for all summer abstractors were sent out at the end of November and should have been returned to us by the end of December. Abstractors need to ensure they have completed their forms.

We will be following up non-returns during early 2014 because the information is needed to assess the effects of abstractions on the environment. Failure to provide the required information could result in enforcement action being taken, and where necessary, abstractors will be reported to the Rural Payments Agency (RPA)

Further information can be found on our [website](#) or by calling our Customer Contact Centre 03708 506506

In addition the Government are currently consulting on the future of abstraction licensing. You can view the press release and take part in this consultation on the [GOV.UK](#) website.

### East Coast Tidal Surge and Flooding

In December, a tidal surge along the East Coast saw around 1,400 properties flooded and resulted in record sea levels in a number of locations.

We currently estimate that 27 km<sup>2</sup> of farmland was flooded whilst 600 km<sup>2</sup> of agricultural land has been protected from flooding. A briefing note is available for NFU members on the [NFU website](#), which provides advice to farmers, landowners and tenants on recovery following the surge. It also gives an overview of the impact on agriculture that we are currently aware of. A similar briefing note is also available on our [website](#).

**Flooded farm land**

You can prepare your property for flooding. It's impossible to completely flood-proof a property but there are lots of things you can do to reduce flood damage. Check out what action you can take by looking at our [website](#)

## Events and diary dates

Event	Date(s)
<a href="#">Bakewell Market Drop in Centre</a> Come and see us on the first Monday of the month: 10am – 2pm, together with the Catchment Sensitive Farming Officer for advice and information.	3 February 2014 3 March 2014 31 March 2014
<a href="#">Green Futures</a> The events will cover Cross Compliance, the latest dos and don'ts, including NVZs, practical advice on soil and farm management to support profitability, avoiding water pollution and aiding compliance with the Water Framework Directive.
