

Bronze turkeys (hens) kept in pole barns

All valuations expressed in pence per bird

Age (days)	7	14	21	28	35	42	49
Farm gate sales	539	571	610	656	696	752	806
Sales to butchers	539	571	610	656	696	752	806

Age (days)	56	63	70	77	84	91	98
Farm gate sales	866	932	1003	1078	1158	1243	1325
Sales to butchers	866	932	1003	1078	1158	1243	1325

Age (days)	105	112	119	126	133	140	147
Farm gate sales	1734	2143	2552	2961	3370	3779	4188
Sales to butchers	1563	1801	2039	2277	2515	2753	2991

Age (days)	154	161	168
Farm gate sales	4597	5006	5415
Sales to butchers	3229	3467	3705

This table is intended to provide valuations for Traditional Farm Fresh ('TFF') and/or seasonally-produced turkeys. They are NOT intended to be used for large-scale, intensive turkey production (e.g. Bernard Matthews/Cranberry Turkeys). Bird numbers for a typical TFF/seasonal site will generally be counted in hundreds rather than thousands, although larger enterprises may produce at the latter level. A typical 'intensive' production site will rear many thousands of birds (individual houses may contain up to 20,000 birds). Rearing accommodation tends to be simple - typically, birds will be reared in 'pole-barns' (open-sided buildings), although a variety of other general farm buildings may be used.

The table provides valuations for bronze-feathered hen birds. If a site rears 'as-hatched' (i.e. males and females together in broadly equal numbers), the corresponding valuation table should be consulted.

Figures are provided for both 'farm gate' sales - i.e. sales direct to the final customer and for 'sales to butchers', which are intended to reflect trade values. Because of the difference in the resultant valuations, it is important to determine which type of outlet the farmer supplies. If both types of outlet are supplied, a pro-rata figure should be calculated. Similarly, if the age of the birds does not exactly match the figures given in the tables, the corresponding pro-rata figure should also be calculated.

Valuations have been based on a maximum slaughter age of 24 weeks at which point the average liveweight has been taken to be 7.5kg (derived from industry targets) with an oven-ready weight of 6kg. Although valuations are determined on the basis of the age of birds, it is strongly recommended that for flocks that are 12 weeks or older, a random sample of 25 culled birds are weighed as a reference in case of future disputed valuation
