

White turkeys (stags) organic, free range

All valuations expressed in pence per bird

Age (days)	7	14	21	28	35	42	49
Farm gate sales	249	288	335	390	440	506	570
Sales to butchers	249	288	335	390	440	506	570

Age (days)	56	63	70	77	84	91	98
Farm gate sales	643	722	806	896	991	1093	1192
Sales to butchers	643	722	806	896	991	1093	1192

Age (days)	105	112	119	126	133	140	147
Farm gate sales	2074	2957	3840	4722	5605	6488	7370
Sales to butchers	1790	2388	2986	3584	4182	4779	5377

Age (days)	154	161	168
Farm gate sales	8253	9136	10018
Sales to butchers	5975	6573	7171

This table is intended to provide valuations for Traditional Farm Fresh ('TFF') and/or seasonally-produced turkeys reared under organic, free range conditions. They are NOT intended to be used for large-scale, intensive turkey production (e.g. Bernard Matthews/Cranberry Turkeys). Bird numbers for a typical TFF/seasonal site will generally be counted in hundreds rather than thousands, although larger enterprises may produce at the latter level. By comparison, a typical 'intensive' production site will rear many thousands of birds (individual houses may contain up to 20,000 birds).

During the first few weeks of the rearing period, free range birds will be kept indoors in brooding houses (or sheds).

The table provides valuations for bronze-feathered birds reared as-hatched (i.e. males and females reared together in broadly equal numbers). If a site rears only females ('hens'), the corresponding valuation table should be consulted.

Figures are provided for both 'farm gate' sales - i.e. sales direct to the final customer and for 'sales to butchers', which are intended to reflect trade values. Because of the difference in the resultant valuations, it is important to determine which type of outlet the farmer supplies. If both types of outlet are supplied, a pro-rata figure should be calculated. Similarly, if the age of the birds does not exactly match the figures given in the tables, the corresponding pro-rata figure should also be calculated.

Valuations have been based on a maximum slaughter age of 24 weeks at which point the average liveweight has been taken to be 9.6kg (derived from industry targets) with an oven-ready weight of 7.6kg. Although valuations are determined on the basis of the age of birds, it is strongly recommended that for flocks that are 12 weeks or older, a random sample of 25 culled birds are weighed as a reference in case of future disputed valuation
