This table is intended to reflect traditional systems of rearing geese where the birds are allowed to graze on pasture and nutrition is not solely based on feeding concentrates. The valuations are net of processing / marketing costs - i.e. they are intended to reflect the value of the live bird prior to slaughter and before processing, marketing and distribution costs have been incurred.

The majority of geese are sold either from the farm gate or to butchers. Because of the premium on selling geese direct to the public, it is important to determine which market the producer supplies. Where a producer supplies geese into both markets, a pro-rata figure should be calculated. Similarly, where the age of the birds does not exactly match the figures provided in the table, the pro-rata figure should be calculated.

The valuations have been based on a maximum slaughter age of 26 weeks, an average liveweight at this point of 9kg and a dressed weight of 6.5kg. Although valuations are determined on the basis of age of birds, it is strongly recommended that for flocks that are 12 weeks or older, a random sample of 25 culled birds are weighed as a reference in case of future disputed valuation.

Valuation figures increase rapidly from 98 days onwards (14 weeks) in line with the minimum age at which birds are normally processed for sale - i.e. birds are not normally ready for slaughter before this age. Up to this point, the valuation figure for both 'farm gate' and 'sales to butchers' is the same.
