Introduction

This report presents the latest findings from the Justice Data Lab, and summarises the requests for re-offending information through the Justice Data Lab for the period 2nd April 2013 to 31st January 2015.

This report has been produced and published in line with the Code of Practice for Official Statistics. This report will be updated and published on the second Thursday of each month for the duration of the Justice Data Lab pilot.

We welcome any feedback on this report or any other Justice Data Lab products. Please use the contact details at the end of this report to let us know your feedback.

What is the Justice Data Lab initiative and how does it work?

The Justice Data Lab has been launched as a pilot from April 2013. During the pilot, a small team from Analytical Services within the Ministry of Justice (the Justice Data Lab team) is supporting organisations that provide offender services by allowing them easy access to aggregate re-offending data, specific to the group of people they have worked with. This service is intended to support organisations in understanding their effectiveness at reducing re-offending.

Participating organisations supply the Justice Data Lab with details of the offenders who they have worked with, and information about the services they have provided. The Justice Data Lab team matches these individuals to the re-offending datasets held within the Ministry of Justice and uses statistical modelling techniques to generate a matched control group of individuals with very similar characteristics. As a standard output, the Justice Data Lab supplies aggregate one year proven re-offending rates for the group of offenders the organisation has worked with, and those of the matched control group of similar offenders.

The re-offending rates for the organisation's group and the matched control group are also compared using statistical testing to assess the impact of the organisation's work on reducing re-offending. The results are then returned to the organisation with explanations of the key metrics, and any caveats and limitations necessary for interpretation of the results.

Finally, the tailored reports produced for each organisation are published on the Ministry of Justice website to promote transparency and ensure that findings produced through this service can be used by others to improve the rehabilitation of offenders.

Key Findings

The following activity has taken place this month:

- One request has been fully answered and is being published this month:
 - One request is for the organisation Inside Out (formerly Wormwood Scrubs Community Chaplaincy) where the analysis of the mentoring scheme they provide against a matched national (England and Wales) comparison group and a matched regional (London) comparison group shows inconclusive results in the one year proven re-offending rate.
- One request was rejected as we were unsatisfied with the quality of the matching between the organisation's data and our administrative datasets, therefore it did not meet the minimum criteria for a Justice Data Lab analysis.

To date:

Between the launch of the Justice Data Lab service on the 2nd April 2013, and 31st January 2015 there were 153 requests for re-offending information through the Justice Data Lab. Of these requests;

- 121 reports have been published previously. 1 report is being published this month.
- 18 requests could not be answered as the minimum criteria for a Justice Data Lab analysis had not been met.
- 1 request was withdrawn by the submitting organisation.
- The remaining 12 requests will be processed in due course.

Definitions used in Justice Data Lab reports:

One year proven re-offending rate

The one year proven re-offending rate is defined as the proportion of offenders in a cohort who commit an offence in a one year follow-up period which was proven through receipt of a court conviction, caution, reprimand or warning during the one year follow-up or in a further six month waiting period. The one year follow-up period begins when offenders leave custody, start their court sentence, or from receipt of their caution.

Frequency of one year proven re-offending

The frequency of one year proven re-offending is defined as the number of re-offences committed in a one year follow-up period which were proven through receipt of a court conviction, caution, reprimand or warning during the one year follow-up or in a further six month waiting period. The one year follow-up period begins when offenders leave custody, start their court sentence, or from receipt of their caution.

Time to re-offending

Time to re-offending is defined as the average number of days between the index date (release date from custody or start of probation date) and the offence date of the first re-offence within the one year follow-up period described in the definitions above. This measure is only calculated for individuals that re-offended in the one year follow-up period.

Table 1: Request being published this month.

Organisation and Programme	Summary of Programme	Effect on the one year proven re-offending rate	Effect on the frequency of one year proven re-offending	Effect on the time to re-offending
<p>1</p> <p>Inside Out (formerly known as Wormwood Scrubs Community Chaplaincy) Mentoring Intervention</p>	<p>Inside Out (formerly Wormwood Scrubs Community Chaplaincy) is a venture for the public benefit, aiming to promote the care, resettlement and rehabilitation of ex-offenders to enable them to take control of their lives and remain free from re-offending. The mentoring scheme is a voluntary intervention, so prisoners can decide whether or not they want a mentor. Individuals are referred to the mentoring service whilst they are in prison, so referrals are most often made through departments and agencies within the prison, for example through Chaplaincy, Education, Substance Misuse, Probation and IOM (Integrated Offender Management) teams. The prisoners can also refer themselves to the mentoring scheme by submitting a general application or speaking to one of the mentoring scheme employees when they are on the wings. This analysis relates to offenders who participated in the mentoring scheme run by Inside Out whilst in custody and into the community between 2007 and 2012.</p>	<p>This analysis looked at the impact of participating in the mentoring scheme provided by Inside Out on re-offending. This analysis is currently inconclusive as the one year proven re-offending rate is between a 18 percentage point reduction, and a 14 percentage point increase compared to a matched control group of similar individuals from England and Wales.</p> <p>When this analysis was repeated with a control group of similar individuals from London only, the conclusion of the analysis was the</p>	<p>The frequency of one year proven re-offending for 42¹ offenders who participated in the mentoring scheme provided by Inside Out was 2.14 offences per individual, compared with 1.94 per individual in a matched control group of similar individuals from England and Wales. Statistical significance testing has shown that this difference in the frequency of re-offending is not statistically significant.</p> <p>When this analysis was repeated with a control</p>	<p>The average time to the first offence within a year for the 21 individuals that were matched, and re-offended, after participating in the mentoring scheme provided by Inside Out was 154 days. This compares to 128 days for the 41,517 individuals who re-offended from a matched control group of similar individuals from England and Wales. Statistical significance testing has shown that this difference in the time to first re-offence within a year is not statistically significant.</p> <p>When this analysis was repeated with a control group of similar individuals from London only, the conclusion of the analysis was the same, although the estimate of the</p>
