

Roly Poly, white & bronze organic, free range stags

All valuations expressed in pence per bird

Age (days)	7	14	21	28	35	42	49
Farm gate sales	281	318	363	414	461	524	584
Sales to butchers	281	318	363	414	461	524	584

Age (days)	56	63	70	77	84	91	98
Farm gate sales	652	727	807	891	982	1080	1172
Sales to butchers	652	727	807	891	982	1080	1172

Age (days)	105	112	119	126	133	140	147
Farm gate sales	1988	2805	3622	4438	5255	6072	6888
Sales to butchers	1721	2270	2819	3368	3918	4467	5016

Age (days)	154	161	168
Farm gate sales	7705	8522	9339
Sales to butchers	5565	6115	6664

This table is intended to provide valuations for Traditional Farm Fresh ('TFF') and/or seasonally-produced turkeys reared under organic, free range conditions. They are NOT intended to be used for large-scale, intensive turkey production (e.g. Bernard Matthews/Cranberry Turkeys). Bird numbers for a typical TFF/seasonal site will generally be counted in hundreds rather than thousands, although larger enterprises may produce at the latter level. By comparison, a typical 'intensive' production site will rear many thousands of birds (individual houses may contain up to 20,000 birds).

During the first few weeks of the rearing period, free range birds will be kept indoors in brooding houses (or sheds).

The table provides valuations for white and bronze-feathered birds reared stag, based on the 'Roly Poly' strain. If a stie rears only females ('hens') and/or 'as hatched' (males and females together), the corresponding valuation table should be consulted.

Figures are provided for both 'farm gate' sales - i.e. sales direct to the final customer and for 'sales to butchers', which are intended to reflect trade values. Because of the difference in the resultant valuations, it is important to determine which type of outlet the farmer supplies. If both types of outlet are supplied, a pro-rata figure should be calculated. Similarly, if the age of the birds does not exactly match the figures given in the tables, the corresponding pro-rata figure should also be calculated.

Valuations have been based on a maximum slaughter age of 24 weeks at which point the average liveweight has been taken to be 9.6kg (derived from industry targets) with an oven-ready weight of 7.6kg. Although valuations are determined on the basis of the age of birds, it is strongly recommended that for flocks that are 12 weeks or older, a random sample of 25 culled birds are weighed as a reference in case of future disputed valuation
