Now, we are going to present you with some more choices between two situations. Please imagine that each situation is exactly the same as for #LEG2#actual #MODE# journey at the time you made the journey, except:

- **IF MODE=CAR:** The one way travel time may be different because, for example, travel times can be reduced through improvements in traffic control
- **IF MODE=BUS:** The one-way travel time may be different because, for example, there are slower or faster buses

- **IF MODE=CAR:** The one way travel cost may be different because, for example, of a change in the cost of fuel **IF MODE<>CAR:** The one way travel cost may be different because, for example, of a change in fares

In addition, we will ask you to consider the reliability of the #MODE# journey.

You have said that this journey takes you #TIME#. If you made the same journey on another occasion then the travel time may be different because of, for example:

- **IF CAR OR BUS:** breakdowns
- **IF CAR OR BUS:** unplanned roadworks
- **IF CAR OR BUS:** general traffic
- **IF RAIL or TRAM or UNDERGROUND OR METRO:** service disruptions
- **IF RAIL or TRAM or UNDERGROUND OR METRO:** incidents on the line.

Imagine that on five occasions that you make the #MODE# journey **departing at the same time and on the same day of the week**, the actual travel time varies for the reasons suggested above. We want you to think about that #MODE# journey and look at the two options below, each of which show five possible travel times that could arise.

The situations will be presented in the following manner:

Option A		Option B	
One way fare: #£x#		One way fare: #£x#	
Usual travel time: #minutes#		Usual travel time: #minutes#

ABOVE EACH EXERCISE

Imagine that on five occasions that you make the #MODE# journey **departing at the same time and on the same day of the week**, the actual travel time varies for the reasons suggested previously. We want you to think about that #MODE# journey and look at the two options below, each of which show five possible travel times that could arise.

IF PURPOSE = EMPLOYERS BUSINESS (Q3 =2 OR 3 OR Q8 = 2 OR 3) AND Q59Y ≠ 3: For each of the following pairs of options, carefully compare the two options, bearing in mind the company related decision making process that we asked you about earlier.

IF PURPOSE <> EMPLOYERS BUSINESS: For each of the following pairs of options, carefully compare the two options, bearing in mind who paid for the actual journey and who else is travelling with you.

IF PURPOSE = EMPLOYERS BUSINESS AND Q59Y=3 (THEY SAID COMPANY WOULD NOT PAY) You previously said that the company would not be interested in paying to save time, therefore, please answer as if you were paying yourself. For each of the following pairs of options, carefully compare the two options.

Then choose the one you prefer, keeping in mind all of the circumstances of the #MODE# journey at the time you made the journey and assuming that the only things that vary are the costs and times shown.

Travel preferences**

Earlier in the questionnaire you indicated that on your car journey from #Q2# you encountered the following road conditions:

- **IF Q30B>1:** #Q30B# minutes in heavy traffic
- **IF Q30E>1:** #Q30E# minutes in light traffic
- **IF Q30F>1:** #Q30F# minutes in free flowing traffic

Heavy traffic – Your speed is noticeably restricted and frequent gear changes are required.

Light traffic – You can travel close to the speed limit most of the time, but you have to slow down every so often

Free flowing – You can travel at your own speed with no problems over-taking

On the following screens you will be presented with a number of choices between two situations where we may change the amount of time you spend in free flowing traffic and the amount of time you spend in light and heavy traffic.

We will also show you changes to travel costs.

Please imagine that each situation is exactly the same as for #LEG2# actual car journey at the time you made the journey except for the changes described.

The situations will be presented in the following manner:

	Option A	Option B
Travel time in different traffic conditions	#minutes# in heavy traffic #minutes# in light traffic #minutes# in free flowing traffic	#minutes# in heavy traffic #minutes# in light traffic #minutes# in free flowing traffic
One way cost	£#X#	£#X#

IF PURPOSE = EMPLOYERS BUSINESS (Q3 =2 OR 3 OR Q8 = 2 OR 3) AND Q59Y ≠ 3: For each of the following pairs of options, carefully compare the two options, bearing in mind the company related decision making process that we asked you about earlier.

IF PURPOSE <> EMPLOYERS BUSINESS: For each of the following pairs of options, carefully compare the two options, bearing in mind who paid for the actual journey and who else is travelling with you.

IF PURPOSE = EMPLOYERS BUSINESS AND Q59Y=3 (THEY SAID COMPANY WOULD NOT PAY) You previously said that the company would not be interested in paying to save time, therefore, please answer as if you were paying yourself. For each of the following pairs of options, carefully compare the two options.

Then choose the one you prefer, keeping in mind all of the circumstances of the #MODE# journey at the time you made the journey and assuming that the only things that vary are the traffic conditions, costs and times shown.

Travel preferences

Now, we are going to present you with some more choices between two situations for bus travel.

In addition to variations in fare and service frequency between the two options, we also vary the amount of time in the following situations as a result of:

- Differences in the amount of time the bus spends at bus stops
- Time spent slowing down or in congested traffic
- The amount of time spent at normal speeds

These changes could come about because of the introduction of bus priority schemes.

The situations will be presented in the following manner:

	Option A	Option B
Time travelling at normal speed	#x# minutes	#x# minutes
Time slowing down or in congested traffic	#y# minutes	#z# minutes
Time bus spends at bus stops	#a# minutes	#b# minutes
One way fare	£#X#	£#X#
Frequency	Every #X# minutes	Every #Y# minutes

For each of the following pairs of options, carefully compare the two options and then choose the one you would prefer, keeping in mind all of the circumstances of the bus journey at the time you made it and assuming that the only things that vary are the costs, times and frequency shown.

My employer would pay if the benefits of the time saving exceeded the costs

My employer would pay come what may

My employer would not be interested in buying a time saving for me on this journey

Q67c **IF Q67y=2 ASK:** Why do you say your employer would pay come what may?

My employer always chooses the quickest travel option

It is always worth paying more to reduce staff travel time

Other (please type in)

Q67d **IF Q67y =1 OR 2 ASK:** You said your employer would pay for times savings. Why do you think this is? : **READ OUT MULTI-RESPONSE**

You are travelling in unsocial hours

You would be more productive (eg, by spending more time at the destination with clients) or by getting back to work quicker

You do a lot of travelling and your employer is concerned with your wellbeing

Your employer always goes for the quickest option

Other (please type in)

I am very sure of what my employer would allow

I am fairly sure of what my employer would allow

I am unsure of what my employer would allow

I am not at all sure of what my employer would allow

Q67f **IF Q67y =3 ASK:** Why would your employer not pay?

I would benefit from the time saving, not the company

It is part of my contract to travel

My employer always chooses the cheapest travel option

I work while travelling so my employer would lose that if the journey was shorter

Q15z **IF Q15Y = 1 GO TO Q15B:** Do you think that the company would not be interested in buying a time saving for them on this journey?

Yes **GO TO Q15Z**

No

Q15z2 Why do you say that? **MULTICODE**

The employee would just benefit from the time saving, not the organisation

It is part of their contract to travel

The organisation always chooses the cheapest travel option

They work while travelling and the organisation would lose that if the journey was shorter

Other (please type in)

Q15b And how would the travel be purchased: centrally or by the employee and then claimed back? **MULTICODE**

Travel is purchased centrally

Employee buys and then claims back

Employee buys with company credit card or on company account

Q15c - Does your organisation have any policy with respect to the timing of the journey?

TICK ANY OF THE FOLLOWING WHICH APPLY.

IF #MODE# = 1(CAR) SHOW:

The employee is expected to travel when traffic is lightest, even if this means travelling outside normal working hours.

The employee is expected to travel only during normal working hours.

IF #MODE# <> 1(CAR) SHOW:

The employee is expected to travel when fares are cheapest, even if this means travelling outside normal working hours.

The employee is expected to travel only during normal working hours.

Business travel preferences

We would now like you to think about the #LEG# part of the #MODE2# trip your employee made, as you have described, and indicate what you think they should have done if some of the travel conditions changed.

We would like you to consider these situations in the context of the #LEG# part of the journey.

On the following screens you will be presented with a number of choices between two situations. Please imagine that each situation is exactly the same as for the actual #MODE2# journey at the time the journey was made, except:

- **IF MODE=1(CAR):** The one way travel time may be different because, for example, journey times vary due to changes in traffic control
IF MODE=2-3 AND 5 (RAIL, METRO OR UNDERGROUND): The one-way travel time may be different because, for example, there are slower or faster trains
IF MODE=4, 6-9 (TRAM): The one-way travel time may be different because, for example, there are slower or faster trams
- **IF MODE=1(CAR):** The one way travel costs may be different because, for example, of a change in the cost of fuel
IF MODE<>1(CAR): The one way travel costs may be different because, for example, of a change in fares

The situations will be presented in the following manner:

	Option A	Option B
One way travel time	#X# minutes	#Y# minutes
IF MODE=1(CAR): One way travel cost IF MODE<>1(CAR): One way travel fare	£#X#	£#Y#

We will be asking you to state which option you think your employee **should** have chosen.

For each of the following pairs of options, carefully compare the two options and then state the one you think your employee should choose keeping in mind all of the circumstances of the #MODE2# journey at the time the journey was made and assuming that the only things that vary are the costs and times shown.

SP2: Reliability – Car, Rail and Other PT

Business travel preferences

And now we are going to present you with a number of choices between two situations. Please imagine that each situation is exactly the same as for the actual #LEG# part of the #MODE2# journey made by your employee at the time when the journey was made, except:

- **IF MODE=1 (CAR):** The one way travel time may be different because, for example, journey times can be reduced through improvements in traffic control
- **IF MODE= 2-9 (RAIL OR OTHER PT):** The one way travel time may be different because, for example, there is a change in the number of stops made by the service
- **IF MODE=1 (CAR):** The one way travel costs may be different because, for example, of a change in the cost of fuel
- **IF MODE= 2-9 (RAIL OR OTHER PT):** The one way travel costs may be different because, for example, of a change in the ticket cost

In addition, we will ask you to consider the reliability of the #MODE2# journey.

You have said that this journey your employee made took #TIME#. If they made the same journey on another occasion then the travel time may be different because of, for example, [IF MODE=1] of breakdowns, unplanned roadworks or general traffic/[IF MODE=#IF 2-9#] faults with the track, incidents on the line.

Imagine that on five occasions they made the #MODE2# journey **departing at the same time** and on the same day of the week, the actual travel time varies for the reasons suggested above. We want you to think about that #MODE2# journey and look at the two options below, each of which show five possible travel times that could arise.

IF MODE<>CAR SHOW: ‘Scheduled journey time’ instead of ‘Usual journey time’
IF MODE=CAR DON’T SHOW: Arrive:, # minutes late, on time

The situations will be presented in the following manner:

Option A		Option B	
One way fare: #£x#		One way fare: #£x#	
Usual travel time: #minutes#		Usual travel time: #minutes# -	
Actual travel times	Arrive:	Actual travel times	Arrive:

#x# minutes	#y# ¹	#x# minutes	#y# ¹
#x# minutes	#y# ¹	#x# minutes	#y# ¹
#x# minutes	#y# ¹	#x# minutes	#y# ¹

1. #y# = '#x# minutes early' / '#x# minutes late' or 'on time'

IF MODE= 1(CAR) SHOW: 'Usual in-vehicle travel time' instead of 'Usual travel time' -

IF MODE=1(CAR) SHOW: 'One way fuel cost' instead of 'One way fare' -

IF MODE=1(CAR) DON'T SHOW: Arrive:, # minutes late, on time -

We will be asking you to state what you think your employee **should** choose. -

We would like you to consider these situations in the context of the ["outward/return" DP: THIS MUST BE THE SAME AS FOR "SP1 TIME V COST ABSTRACT SP CAR AND RAIL AND OTHER PT"] leg of the journey. -

For each of the following pairs of options, carefully compare the two options and then state which one your employee should have chosen keeping in mind all of the circumstances of the #MODE2# journey at the time the journey was made and assuming that the only things that vary are the costs and times shown. -

Business travel preferences

And now we are going to present you with a number of choices between two situations where we may change the amount of time your employee spends in free flowing traffic and the amount of time your employee spends in light and heavy congested traffic.

We will also show you changes to travel times and costs.

Please imagine that each situation is exactly the same as for the actual #LEG# part of the car journey made by your employee at the time they made the journey except for the changes described.

The situations will be presented in the following manner:

	Option A	Option B
One way cost	£#X#	£#X#
Travel time in different traffic conditions	#minutes# in heavy congestion #minutes# in light congestion #minutes# in free flowing traffic	#minutes# in heavy congestion #minutes# in light congestion #minutes# in free flowing traffic

We will be asking you to state what you think your employee **should** choose in each situation.

SP3b – IF RAIL OR OTHER PT: Time v Cost v crowding

Business travel preferences

In the options below we will vary the crowding level and we will also show you changes to travel times and costs:

- **IF MODE= 2-3 AND 5 (RAIL, UNDERGROUND AND METRO):** The one way travel time may be different because, for example, there are slower or faster trains
- **IF MODE= 4 AND 6-9 (TRAM):** The one way travel time may be different because, for example, there are slower or faster trams

- The one way travel costs may be different because of changes to fares.

Please imagine that each situation is exactly the same as for the actual #LEG# part of the #MODE2# journey made by your employee at the time they made the journey except for the changes described.

The situations will be presented in the following manner:

	Option A	Option B
One way travel time	#X# minutes	#Y# minutes
One way fare	£#X#	£#X#
Crowding level	No seats free – a few others standing	Plenty of seats free and did not have to sit next to anyone

We will be asking you to state what you think your employee **should** choose in each situation.

For each of the following pairs of options, carefully compare the two options and then state which one your employee should have chosen keeping in mind all of the circumstances of the #MODE2# journey at the time the journey was made and assuming that the only things that vary are the crowding level, costs and times shown.
