

COMMITTEE ON MUTAGENICITY OF CHEMICALS IN FOOD, CONSUMER PRODUCTS AND THE ENVIRONMENT (COM)

Evidence for Transgenerational Effects

- 1) The Chair has suggested that the Committee review the HPA report on transgenerational effects following exposure to radiation with a view to understanding the impact that similar effects may have following exposure to some chemicals. This paper is in Annex 1.
- 2) COM previously examined transgenerational effects of methylation following a request from ACP to look at studies which had indicated that the pesticide vinclozalin may have these effects. This paper is in Annex 1.
- 3) Questions for the committee: is there a need to review transgenerational effects from chemical exposure? If so, what should be the focus of this review?
