

HS2 Phase One fly-through

Explanatory notes

The HS2 fly-through animations of the Phase One route between the West Midlands and London Euston were developed by HS2 Ltd using the project's engineering and environmental data.

This data is the same as that used in the drawings published in November 2013 and deposited in Parliament as part of the [High Speed Rail \(London - West Midlands\) Bill](#) and [Environmental Statement](#). The drawings show how the line and surrounding land will look once the railway is built and in operation.

An aerial video was filmed as the background of the animation. The CGI was superimposed on the video to show the current engineering and environmental design as described in the Bill.

These land boundaries are a snapshot in time: they do not reflect further design development since November 2013, or assurances and commitments given to landowners during the Parliamentary Select Committee process.
