

National Geological Screening
Public consultation response

When complete, please email to NGSconsultation@nda.gov.uk or send by post to:
National Geological Screening Consultation, Radioactive Waste Management,
Building 587, Curie Avenue, Harwell, Didcot OX11 0RH.

Name Anna Heys

Email address [REDACTED]

Organisation -

Question 1:

To what extent do you think our proposed approach to providing national-scale existing information about geology relevant to long-term safety is appropriate? Please give your reasons.

Hello and your first question should be the question i highlight in answer to question no. 4.

All information should be made freely available to the public so the public can make an informed decision. Differently levels of information for the population who can delve deeper into particular aspects they need to. We want to know everything you know. This answers question 2 and 3 also.

Question 2:

To what extent do you think that the proposed national information sources are appropriate and sufficient for this exercise? Please give your reasons.

Question 3:

To what extent do you agree or disagree with the proposed form of the outputs from geological screening? What additional outputs would you find useful?

Question 4:

Do you have any other views on the matters presented in the draft Guidance? Yes.

The answer to this question should be question 1. which is 'Should we still making more radiation waste when disposal of it is currently a national catastrophe with the thousands of tonnes already generated?'

The answer is of course is

NO, DEFINITELY NOT!

We should NOT try and solve the problem of where to store our radiation waste making the problem even worse by carrying on making more!

This, ESPECIALLY when energy can be hamessed more simply

and much more safely from

Solar, Wind and Water power without the horrendous impact and great cost

to human life

and the enviroment

which we all live in.

The message here is

NO DIALOGUE SHOULD TAKE PLACE WITH THE GENERAL PUBLIC ON RADIOACTIVE WASTE MANAGEMENT WITHOUT FIRST PUTTING A STOP ON CREATING ANYMORE RADIOACTIVE WASTE.

1. To answer a question on Radioactive Waste Management, you need address the human and enviromental cost to life.

I cannot find any information regarding the implecations of Radio Active Waste management on how people's health here or in the public consultation exercise are affected by Radioactive waste.

Statistics showing deaths caused from radiation waste and illness were not mentioned. No mention of how people will be compensated if they become ill or die from Radioactive waste.

And the effects of the enviroment from radioactive waste were ommitted, just types and features of the geology and their properties.

Final note to RWM team: **NO DIALOGUE SHOULD TAKE PLACE WITH THE GENERAL PUBLIC ON RADIOACTIVE WASTE MANAGEMENT WITHOUT FIRST PUTTING A STOP ON CREATING ANYMORE RADIOACTIVE WASTE.** Thankyou for reading, it was time well spent!
