

**White turkeys (hens) kept in pole barns**

**All valuations expressed in pence per bird**

Age (days)	7	14	21	28	35	42	49
Farm gate sales	538	564	594	629	661	700	740
Sales to butchers	538	564	594	629	661	700	740

Age (days)	56	63	70	77	84	91	98
Farm gate sales	784	830	879	932	985	1041	1090
Sales to butchers	784	830	879	932	985	1041	1090

Age (days)	105	112	119	126	133	140	147
Farm gate sales	1499	1909	2318	2728	3137	3547	3957
Sales to butchers	1358	1627	1896	2165	2433	2702	2971

Age (days)	154	161	168
Farm gate sales	4366	4776	5185
Sales to butchers	3240	3508	3777

This table is intended to provide valuations for Traditional Farm Fresh ('TFF') and/or seasonally-produced turkeys. They are NOT intended to be used for large-scale, intensive turkey production (e.g. Bernard Matthews/Faccenda Turkeys). Bird numbers for a typical TFF/seasonal site will generally be counted in hundreds rather than thousands, although larger enterprises may produce at the latter level. A typical 'intensive' production site will rear many thousands of birds (individual houses may contain up to 20,000 birds). Rearing accommodation tends to be simple - typically, birds will be reared in 'pole-barns' (open-sided buildings), although a variety of other general farm buildings may be used.

The table provides valuations for white-feathered hen birds. If a site rears 'as-hatched' flocks (hens and stags together in broadly equal numbers), the corresponding valuation table should be consulted.

Figures are provided for both 'farm gate' sales - i.e. sales direct to the final customer and for 'sales to butchers', which are intended to reflect trade values. Because of the difference in the resultant valuations, it is important to determine which type of outlet the farmer supplies. If both types of outlet are supplied, a pro-rata figure should be calculated. Similarly, if the age of the birds does not exactly match the figures given in the tables, the corresponding pro-rata figure should also be calculated.

Valuations have been based on a maximum slaughter age of 24 weeks at which point the average liveweight has been taken to be 7.5 kg (derived from industry targets) with an oven-ready weight of 6kg. Although valuations are determined on the basis of the age of birds, it is strongly recommended that for flocks that are 12 weeks or older, a random sample of 25 culled birds are weighed as a reference in case of future disputed valuation
