

EU Certification Scheme Fruit Plants

EXPLANATORY GUIDE TO TOP FRUIT

Cydonia, Malus, Prunus, Pyrus

Complete Trees Basic 1, Basic 2 and Certified Categories

CONTENTS

1. Introduction
2. Applications
3. Labelling / sealing and supplier / variety registration
4. Grades and stock eligibility
5. Soil sampling requirements
6. Isolation distances for field grown material
7. Spacing
8. Identifying Stocks
9. Control of Diseases / Standards to be Met
10. Roguing
11. Gapping up
12. Number of inspections
13. Quarantine Pests & Diseases
14. Record keeping (Critical Points Plan)

1. INTRODUCTION

This document is a guide to Top Fruit certification taken from the implementation of Council Directive 2008/90/EC and its Commission Implementing Directives 2014/96/EC, 2014/97/EC and 2014/98/EC.

2. APPLICATIONS

The scheme is open to any grower in England and Wales who can meet the general conditions for entry and comply with the specific conditions of entry. Applications for entry of material to be submitted through the approved administrator presently the Nuclear Stock Association Limited. Visit <http://nsa-plants.co.uk>
Growers will need to apply to APHA and be registered to issue Plant Passports.

3. LABELLING / SEALING AND SUPPLIER / VARIETY REGISTRATION

Refer to separate documents covering labelling / sealing and supplier / variety registration.

4. GRADES AND STOCK ELIGIBILITY

GRADE	PARENT STOCK
Pre-basic	Candidate pre-basic mother plants
Basic 1	Pre-basic
Basic 2	Pre-basic, Basic 1
Certified	Pre-basic, Basic 1, Basic 2

Maiden or 2 year old trees

Basic 1:

Rootstocks must be either Basic 1 or Pre-basic. Scion wood can be Basic 1 or Pre-basic

Basic 2:

Rootstocks shall be Basic 1 or Basic 2. Scion wood can be Basic 1 or Basic 2.

Certified:

Rootstocks may be Basic 1, Basic 2, Basic 3 or Certified. Scion wood can be Basic 1, Basic 2 or Certified.

5. SOIL SAMPLING REQUIREMENTS

Application for soil sampling should be made through the Franchise holder.

Growers can select sites but are advised to consult their local APHA Plant Health & Seeds Inspector if in doubt regarding the eligibility of a proposed field.

Cydonia, Malus, Pyrus
Basic 1, Basic 2 and Certified
Soil sampling not required.

Prunus avium, P. cerasus
Basic 1, Basic 2
Soil sampling of the proposed field in advance of planting required for freedom from nematodes:
Longidorus attenuatus
Longidorus elongatus
Longidorus macrosoma
Xiphinema diversicaudatum

Prunus domestica, P. persica and P. salicina
Basic 1, Basic 2
Soil sampling of the proposed field in advance of planting required for freedom from nematodes:
Longidorus attenuatus
Longidorus elongatus
Xiphinema diversicaudatum

Fields found to be infested cannot be used for certified stocks.

NB. The soil sampling requirements listed shall not apply where host plant species of the nematodes listed above have not been grown on any proposed production field for at least 5 full years or longer.

The relevant hosts for Basic or Certified mother trees of *Prunus spp.* are: grapevine, *Fragaria spp.*, *Ribes spp.*, *Rubus spp.*, cherry, plum, apricot, peach, almond and Japanese plum and their rootstocks, poplar trees, hops, or elder/elderberry.

Prunus avium, P.cerasus, P.domestica, P.persica and P.salicina

Certified Soil sampling not required.

6. ISOLATION DISTANCES FOR FIELD GROWN MATERIAL

Minimum isolation distances apply:

Plum Pox Hosts:

50 metres from any other plum pox hosts (incl. ornamentals) not entered for certification.

Other Prunus:

10 metres from any other *Prunus spp.* not entered for certification.

Cydonia, Malus and Pyrus:

2 metres from any *Pomoideae* not entered for certification.

Growers should ensure they can meet isolation requirements before planting stocks in new sites.

7. SPACING

Lined out complete trees must be in rows at least 0.75 metres apart.

8. IDENTIFYING STOCKS

Each batch of trees of a variety must be permanently and clearly labelled as to type. Stocks must be kept in identifiable lots. Rootstocks of different types or rootstocks produced at different times (even if the same type) may not be mixed.

9. CONTROL OF DISEASES / STANDARDS TO BE MET

The control of pests and diseases must be of the highest standard and failure to achieve this will need rectification and may result in a further chargeable inspection prior to certification.

Where a significant mixture is identified and roguing is impractical certification may be withheld.

10. ROGUING

Limited roguing or removal of affected parts or pesticide treatments in order to meet the requirements is permissible after inspection by APHA Plant Health & Seeds Inspectors, provided records are kept.

11. GAPPING UP

Gapping up is permissible providing that the material used is eligible and prior approval from APHA Plant Health has been obtained. Growers must keep records and make them available if requested to do so.

12. NUMBER OF INSPECTIONS**Basic 1, Basic 2, Basic 3 and Certified**

One inspection for all categories. Usually during late July or early August.

13. QUARANTINE PEST & DISEASES

Growers who become aware of or suspect the presence of any quarantine pest or disease on their premises must immediately notify their local APHA Plant Health & Seeds Inspector.

Requirements for regular 3-yearly official re-testing of some *Prunus* spp. rootstocks for the quarantine pest Plum pox virus will need to be carried out and APHA inspectors will provide information on this requirement.

If 'prunings' of complete *Prunus* trees are used for further production, these complete trees must undergo testing for the quarantine pest Plum pox virus. APHA inspectors will provide information on this requirement. [For info – PPV 2000/29 sampling requirement]

14. RECORD KEEPING (CRITICAL POINTS PLAN)

During the production of propagating material and fruit plants the supplier must maintain relevant information to monitor the key points in the production process. These include:

- Location and number of plants
- Timing of their cultivations
- Propagation operations
- Packaging, storage and transportation operations.

The information should remain available for at least three years and made available to PHSI upon request.
