**Introduction**

**Using the Summary Statistics Tables**

**Summary Statistics Tables**

---

# Introduction

---

This volume presents the English Housing Survey Housing Stock Summary Statistics Tables which are published every year to accompany the English Housing Survey Housing Stock Report. The tables provide a set of detailed findings from the survey organised around seven key topic areas.

## Background to the survey

The English Housing Survey (EHS) has three component surveys: a household interview, followed by a physical inspection and a market value survey of a sub sample of the properties. Methodological and technical details about the survey can be found in the EHS Technical Advice Notes published on the EHS website.

These EHS results are presented for '2009' and are based on survey fieldwork carried out between April 2008 and March 2010 (a mid-point of April 2009). The sample comprises of 16,150 occupied or vacant dwellings where a physical inspection was carried out. This is referred to as the '**dwelling sample**'. There are 15,512 cases where as well as a physical inspection, an interview with the households was also secured. This is referred to as the '**household sub-sample**'.

## Further information

Information about the EHS can be accessed via this link <http://www.communities.gov.uk/housing/housingresearch/housingsurveys/englishhousingurvey/>. The dataset will be made available to users via the Data Archive, <http://www.data-archive.ac.uk>

If you have any queries about the EHS or would like any further information please contact [ehs@communities.gsi.gov.uk](mailto:ehs@communities.gsi.gov.uk)

**Responsible Statistician:** Meg Green, Deputy Director. Contact via [ehs@communities.gsi.gov.uk](mailto:ehs@communities.gsi.gov.uk)

# Using the Summary Statistics Tables

---

The tables provide breakdowns of key **descriptors** of the housing stock or **measures** of housing conditions and energy performance (e.g. dwelling size, tenure, disrepair, and energy efficiency).

Most of the tables are organised to provide breakdowns of these key descriptors/measures by a range of classifications of either **dwelling**s (e.g. tenure, type, age of dwelling), **areas** (e.g. urban/rural, level of deprivation, broad regional groups), or **households** (e.g. type, age of oldest person, income, length of residence). Where there is additional value or interest some additional types of breakdowns are provided.

For the most part, the tables provide an overall total number of dwellings or households (rounded to thousands) for each classifying group. For example, in Summary Statistics Table SST7.1 there are 14,963,000 dwellings in the owner occupied group. This figure acts as the denominator for all other statistics for this group: for example, in 2009 there were 1,884,390 (12.6%) owner occupied dwellings with a Band F energy efficiency rating; the average (mean) energy efficiency rating for all owner occupied dwellings was 51.3, and the average (mean) CO<sub>2</sub> emission resulting from the heating and lighting requirements for each owner occupied dwelling was 6.7 tonnes per year (totalling 99.6 million tonnes for the owner occupied stock as a whole).

These Summary Statistics Tables are also available in spreadsheet form on the EHS website to facilitate the derivation of additional statistics.

## Further notes on using the tables

- 1) All statistics from this sample survey have a margin of error associated with them (arising from sample, design and measurement error). Indicators of the likely level of error are provided in the appendix to the main EHS Housing Stock Report 2009. These need to be taken into account when interpreting the results of the survey. The sample size for each group is included in the far right hand column of each table.
- 2) For the most part missing data for key descriptors and measures used in the survey are attributed during the detailed programming required to produce them. See the EHS Technical Advice Notes for details <http://www.communities.gov.uk/publications/housing/ehstechnicaladvice/notes>
- 3) Each classificatory variable (e.g. tenure, age of property, age of oldest person in the household) generally included exhaustive and exclusive categories and will therefore sum to the total number of dwellings or

---

households. However in a minority some additional composite categories are added. The following sets out the structure of the categories. Detailed definitions of categories are provided in the Glossary of the main English Housing Survey Housing Stock Report.

# Dwellings

<b>tenure</b>	
owner occupied private rented local authority housing association	} <b>all dwellings</b>
all private all social	} categories sum to all dwellings. 'All private' includes owner occupied and private rented, 'all social' include local authority and housing association dwellings
<b>occupancy status</b>	
occupied vacant	} <b>all dwellings</b>
<b>dwelling age</b>	
pre- 1919 1919-44 1945-64 1965-80 1981-90 post 1990	} <b>all dwellings</b>
<b>dwelling type</b>	
end terrace mid terrace small terraced house medium/large terraced house	} categories sum to 'all terrace' } alternative categories that sum to 'all terrace'
all terrace semi-detached detached bungalow converted flat pb flat, low rise pb flat, high rise	} <b>all dwellings</b>
all houses all flats	} categories sum to all dwellings. 'All houses' include all terrace, semi-detached, detached and bungalows; 'all flats' include converted and purpose built flats
<b>size</b>	
less than 50m <sup>2</sup> 50 to 69m <sup>2</sup> 70 to 89m <sup>2</sup> 90 to 109m <sup>2</sup> 110m <sup>2</sup> or more	} <b>all dwellings</b>

## Areas

<b>area type</b>	
<ul style="list-style-type: none"> <li>city centre</li> <li>other urban centre</li> <li>suburban residential</li> <li>rural residential</li> <li>village centre</li> <li>rural</li> </ul>	<p><b>all dwellings</b></p> <p>categories sum to all dwellings. 'All rural areas' includes rural residential, village centre and rural</p>
<ul style="list-style-type: none"> <li>all city and urban centres</li> <li>suburban residential</li> <li>all rural areas</li> </ul>	
<b>deprived local areas</b>	
<ul style="list-style-type: none"> <li>most deprived 10% of areas</li> <li>2nd</li> <li>3rd</li> <li>4th</li> <li>5th</li> <li>6th</li> <li>7th</li> <li>8th</li> <li>9th</li> <li>least deprived 10% of areas</li> </ul>	<p><b>all dwellings</b> (local areas are lower level super output areas, ranked and grouped into ten equal numbers of areas from the most to the least deprived)</p>
<b>regional group</b>	
<ul style="list-style-type: none"> <li>northern regions</li> <li>south east regions</li> <li>rest of England</li> </ul>	<p><b>all dwellings</b> ('northern regions' includes North West, North East and Yorkshire and the Humber; 'south east regions' includes South East and London; 'rest of England' includes Eastern, East Midlands, West Midlands and South West)</p>

## Households

<b>household composition</b>	
couple under 60	} <b>all households</b>
couple 60 or over	
couple with children	
lone parent	
multi-person household	
one person under 60	
one person 60 or over	
<b>age of oldest person</b>	
under 60 years	} <b>all households</b>
60 years or more	
75 years or more	sub-group only
<b>age of youngest person</b>	
under 5 years	sub group only
under 16 years	} <b>all households</b>
16 years or more	
<b>income groups</b>	
1st quintile (lowest)	} <b>all households</b> (households are ranked on equivalised household income before housing costs and ordered into five equal sized groups)
2nd quintile	
3rd quintile	
4th quintile	
5th quintile (highest)	
<b>living in poverty</b>	
in poverty	} <b>all households</b> (households in poverty are those below 60% of median income before housing costs)
not in poverty	
<b>workless households</b>	
workless	} categories sum to all households where one or more persons is of working age
not workless	
<b>long term illness or disability</b>	
yes	} <b>all households</b>
no	
<b>ethnicity of HRP</b>	
white	} <b>all households</b>
all minority	
black	} categories sum to all minority households
Asian	
other	
<b>length of residence</b>	
less than 1 year	} <b>all households</b>
1-4 years	
5-9 years	
10-19 years	
20-29 years	
30 or more years

Note: \* Dwellings failing the minimum standard are those posing a Category 1 hazard under the Housing Health and Safety Rating System (HHSRS). From 2008 the survey is able to estimate the presence of 26 of the 29 HHSRS hazards. However to maintain consistency and avoid a break in the time series from 2006, Decent Homes estimates continue to be based on 15 hazards for the 'minimum standard' criterion. Estimates for the HHSRS (SST 4.1 - 4.3) are based on the 26 hazards covered by the survey.

Notes:

1) From 2008 onwards, HHSRS estimates are based on the 26 hazards covered in the EHS. HHSRS estimates for 2006 and 2007 are based on 15 hazards only and therefore are not directly comparable with those for 2008 and subsequent years.

2) 'Any falls' includes those related to stairs, on the level, between levels and those associated with baths. Estimates of 'any falls' published prior to 2008 did not include falls associated with baths and are therefore not directly comparable.

Notes:  
 1) From 2008 onwards, HHSRS estimates are based on the 26 hazards covered in the EHS. HHSRS estimates for 2006 and 2007 are based on 15 hazards only and therefore are not directly comparable with those for 2008 and subsequent years.  
 2) 'Any falls' includes those related to stairs, on the level, between levels and those associated with baths. Estimates of 'any falls' published prior to 2006 did not include falls associated with baths and are therefore not directly comparable.

Notes:

- 1) energy performance statistics are based on standard occupation and heating patterns and therefore do not measure actual costs and consumption by households
- 2) EER and EIR bands A and B are grouped. There are currently insufficient numbers of Band A properties existing for which meaningful estimates can be made through a sample survey.
- 3) energy costs are at constant 2005 prices
