These changes have a minor affect on the overall costs and benefits associated with each option.

Under option 2a, the minor changes to aluminium tonnages lead to an additional NPV over the 5 years of **£0.53m**, resulting in an NPV of £78.5m.

For option 3a, the preferred option, there is an additional **£1.58m** NPV over the 5 year period. The final NPV for option 3a is therefore £258.4m.

This will be corrected in the final Impact Assessment after the consultation closes.
